PREFACE

Water is a precious natural resource with almost fixed quantum of availability. Fresh water has been becoming a scarce commodity day by day in whole world. It's planning and optimal utilization calls for a well developed Data Bank and maintenance of the Data Bank by regular updation. The Central Water Commission under the Union Ministry of Water Resources, River Development and Ganga Rejuvenation, besides being an apex body on Water Resources Sector, has been maintaining a vast system of hydrological data collection Network in different River Basins in India. The collected Hydrological data is being published every water year on basin wise for the benefit of users. This book pertains to the data of East Flowing Rivers Basin from Pennar and Kanyakumari (except Cauvery) under the states of Andhra Pradesh, Tamil Nadu, Puducherry and Karnataka.

With the advent of computerisation of the data, the format of publishing the Water Year Book has also undergone lot of changes. As per the revised format, the Water Year Book is being published in Two Volumes, Volume-I containing the Stream Flow and Suspended Sediment Data and the Volume-II containing the Water Quality Data. The Book presented here contains the Stream Flow and the Suspended Sediment data in Volume-I for the Water Year 2016-17.

The efforts made by the Southern Rivers Division, Coimbatore, Hydrology Division, Chennai under this Circle and Lower Krishna Division, Hyderabad under Krishna & Godavari Basin Organization, Hyderabad in bringing out this Book deserves appreciation.

प्रस्तावना

जल लगभग तय मात्रा में उपलब्धता के साथ एक कीमती प्राकृतिक संसाधन है। ताजा पानी पूरी दुनिया में दिन-ब-दिन एक दुलभ वस्तु बन गया है। यह योजना है कि जल संसाधनों का इष्टतम उपयोग के लिए एक अच्छी तरह से विकसित डाटा बैंक की हो और नियमित रूप से डाटा बैंक का अद्यतन किया जाना चाहिए। जल संसाधन, नदी विकास और गंगा संरक्षण मंत्रालय के अंतर्गत केन्द्रीय जल आयोग जल संसाधन क्षेत्र के शीर्ष मंत्रालय के निकाय होने के अलावा भारत के विभिन्न नदी घाटियों का हाइड्रोलॉजिक डाटा संग्रह का एक विशाल नेटवर्क प्रणाली बनाये रखा है। एकत्रित हाइड्रोलॉजिक डाटा का प्रकाशन प्रत्येक जल वर्ष पुस्तक में बेसिन कम में उपयोगकर्त्ताओं के लाभ के लिए किया जाता है। इस पुस्तक में आंध्रप्रदेश, तमिलनाडु पुडुचेरी तथा कर्नाटक राज्यों के अंतर्गत पूर्व की ओर बहने वाली नदियों बेसिन (कावेरी नदी को छोड़कर) का डाटा है।

डाटा के कम्प्यूटरीकरण के आगमन से जल वर्ष पुस्तक के प्रकाशन प्रारूप में बहुत परिवर्तन आया है। संशोधित प्रारूप के अनुसार जल वर्ष पुस्तक दो संस्करणों में प्रकाशन हो रहा है। प्रथम संस्करण में धारा प्रवाह तथा निलंबित तलछट डाटा और द्वितीय संस्करण में जल गुणवत्ता डाटा के साथ प्रकाशित किया जा रहा है। 2016–17 के जल वर्ष पुस्तक के प्रथम संस्करण में धारा प्रवाह तथा निलंबित तलछट डाटा शामिल है।

इस परिमंडल के अंतर्गत दक्षिणी नदियों मंडल कोयंबत्तूर, जल विज्ञान मंडल चेन्नई तथा कृष्णा एवं गोदावरी बेसिन संगठन के अंतर्गत ऊपरी कृष्णा मंडल, पूने के प्रयासों से इस पुस्तक का प्रकाशन हुआ सभी प्रशंसा के हकदार है।

1.0 BASIN DESCRIPTION

1.1 GEOGRAPHICAL DESCRIPTION OF THE BASIN

The basin of East flowing rivers consists of a number of independent river basins of peninsular India lying to the South of Krishna basin, except Cauvery basin. The East flowing rivers are draining into the Bay of Bengal.

The basin of the East flowing rivers (excluding Cauvery) covers large areas in the states of Andhra Pradesh, Tamil Nadu, Puducherry and a small area in the state of Karnataka. There are twelve river basins of which the Pennar, Palar and Ponnaiyar are more important. Other river basins are the Gundlakamma, the Paleru, the Swarnamukhi, the Kalingi, the Varahanadi, the Vellar, the Vaigai, the Vaippar and the Tamraparani.

There are **27** Hydrological Observation Stations and **23** Rain Gauge Stations maintained by Central Water Commission. Also, the Government of Tamil Nadu is maintaining another 40 Hydrological Observation Stations and 208 Rain Gauge Stations. Further, 10 Nos of Rain Gauge Stations are maintained by IMD. A basin map showing Hydrological Observation Stations and Rain Gauge Stations of both Central Water Commission and India Meteorological Department (IMD) is presented in **Plate-I**. The details of classification of CWC Hydrological observation stations is given in **Annexure-I**. Another map showing Hydrological observation stations and Rain Gauge Stations maintained by Tamil Nadu State Government is enclosed as **Plate-II**. The Tree Structures of Pennar, Palar and Ponnaiyar River Basins are also enclosed as **Plates- III, VI & VIII** respectively.

1.2 DESCRIPTION OF THE RIVER SYSTEM

THE GUNDLAKAMMA

The Gundlakamma river rises near Iskagundam village in Kurnool district at an elevation of 600 m from the Eastern slopes of the Nallamala hills at North latitude $15^{\circ} 38'$ and East longitude $78^{\circ} 47'$ and flows in a North-East, East and Southern direction for a total length of 220 km to join the Bay of Bengal. The total area drained by this river is 8,494 Sq Km. The Kandleru is its important left bank tributary. Central Water Commission is operating one Hydrological Observation site on this River at **Marella**.

THE PENNAR

The Pennar river is one of the major East flowing rivers in Southern India. It rises in the Chennakesava hill of the Nandidurg range in Karnataka, flows in the North - Westerly direction through the Kolar and Tumkur Districts of Karnataka. It enters Andhra Pradesh in the Hindupur taluk of Anantapur district, runs Eastwards before draining into the Bay of Bengal near Nellore. The Basin lies between East longitude $77^{\circ} 04'$ to $80^{\circ} 10'$ and North latitude $13^{\circ} 16'$ to $15^{\circ} 52'$. The Pennar drains an area of 55,213 Sq.Km in the states of Karnataka and Andhra Pradesh as below.

Name of State	Catchment Area (in Sq.Kms)	Percentage of Total Catchment area.
Karnataka	6,937	12.6
Andhra Pradesh	48,276	87.4
Total	55,213	100.0

The total length of Pennar river is 597 Km of which 61 Km runs in Karnataka and the rest in Andhra Pradesh. This river has six major tributaries namely, the Jayamangali, the Kunderu and the Sagileru joining from the left, the Chitravathi, the Papagni and the Cheyyeru joining on the right.

The Catchment Area, Length and elevation at source of some of the important tributaries joining the Pennar are given below:

Name of the River	Bank	Elevation at source (M) -above MSL	Length (Km)	Catchment Area (Sq. Kms)
Jayamangali	Left	1200	77	1282
Chitravathi	Right	1200	218	5908
Kunderu	Left	500	205	8057
Papagni	Right	950	205	7423
Sagileru	Left	700	141	3077
Cheyyeru	Right	700	87	7325

Central Water Commission is operating **9** Hydrological Observation sites on Main Pennar and its tributaries located at **i) Nellore, ii) Nandipalli, iii) Chennur, iv) Alladupalli, v) Kamalapuram, vi) Nandalur, vii) Tadipatri, viii) Nagalamadike and ix) Singavaram.**

THE SWARNAMUKHI

The Swarnamukhi is an East Flowing river basin having a Catchment area of 3,225 Sq.Km. It rises at an elevation of 300 m in the Eastern Ghat ranges near Pakala village in Chittur district of Andhra Pradesh at North latitude 13° 28' and East longitude 79° 09'. It runs generally in the North-Eastern direction passing through the famous Tirupati hills before joining into the Bay of Bengal. Its total length is 130 Km. This is an independent river and has no major tributaries and therefore its flow depends only on rainfall in its upper Catchment. The Hydrological observation site on this River is located at **Naidupeta**.

THE KALINGI

The river Kalingi is one of the East flowing rivers in Andhra Pradesh. It originates near Kalahasti in Andhra Pradesh and drains completely in Andhra Pradesh and joins Pulicat lake after Sulurpet. The Catchment area of Kalingi river is 5,927 Sq.Km and the length is 76 Km. The important tributary is Kalleru river which joins Kalingi river after Sulurpet town. Central Water Commission is operating one Hydrological Observation site on this River at **Sulurpet**.

THE PALAR

The Palar Basin is an important basin among the 12 basins lying between the Pennar and the Cauvery basins. This basin is divided into three major topographical divisions namely, i) the hill ranges of Eastern Ghats ii) the plateau region and iii) the coastal plains. Though most of the drainage area lies in Tamil Nadu, its drainage area extends to cover the South-East and South-Western parts of Karnataka and Andhra Pradesh respectively. The shape of the basin is rhombus and finds its outlet in to Bay of Bengal. Central Water Commission is operating 4 Hydrological Observation sites on this basin at **i) Avarankuppam, ii) Arcot iii) Magaral and iv) Chengalpet**.

The Palar drains an area of 17,871 Sq.Kms out of which nearly 57 percent lies in Tamil Nadu and the balance in the states of Karnataka and Andhra Pradesh. The State wise distribution of the drainage area is given below:

Name of State	Drainage Area (Sq.Kms)	Percentage of Total
Karnataka	3044	17.0
Andhra Pradesh	4681	26.2
Tamil Nadu	10146	56.8
Total	17871	100.0

The river Palar rises beyond Talagvare village in the Kolar district of Karnataka state at an elevation of about 900 m above m.s.l. The total length of this East flowing river from its origin to its outfall into the Bay of Bengal is about 348 Km. The flow is generally in the South-Easterly direction for the first 93 Km. Then it flows through the Kolar District of Karnataka, before entering the Chittoor District of Andhra Pradesh, through which it flows for another 33 Kms. After passing through the States of Karnataka and Andhra Pradesh the river enters the Vellore District of Tamil Nadu. After traversing for another 222 Kms in Vellore and Kanchipuram Districts in Tamil Nadu, the river Palar finally discharges into Bay of Bengal near Kuvattur. On its way, the river Palar receives two important tributaries namely, the Poini on the left bank and the Cheyyar on the right bank. These two important tributaries i.e the Poini and the Cheyyar, together account for nearly 25 percent of the total Catchment of the Palar basin. The Poini rises in the Chittoor district of Andhra Pradesh at an elevation of 1,050 m and flows generally in the Easterly and South-Easterly direction before joining the Palar on its left bank near Walajapet. The Cheyyar, another major tributary rises in the Jawadu hills in the Chengam taluk of Tiruvannamalai district of Tamil Nadu and flows generally in the North-Easterly direction before confluencing with the Palar near Tirumukkudal. The catchment area, length and elevation at source of these two tributaries are given below:

Name of River	Bank	Elevation at source above m.s.l.(m)	Length (Km)	Catchment Area (Sq.Km)
Poini	Left	1,050	90	2,400
Cheyyar	Right	1,080	190	1,953

THE VARAHANADI

The main river Varahanadi originates from the Northern part of Pakkammalai hills at an elevation of 566 m above m.s.l. in the Western slopes past of Gingee Taluk. It has two arms. The left arm originates from Melmalayanur while the right arm originates from Pakkammalai hills and they join together near Thenpalai village and forms the main river Varahanadi and flows in an Easterly direction. On its way, the river Varahanadi receives a number of small streams and rivulets. The total area of the basin is 2564 Sq.Kms. The river runs in Easterly direction up to Kodukkur and South-Easterly direction alternately in Tami Nadu and Puducherry states. The total length of Varahanadi up to its outfall into Bay of Bengal, a little South of Puducherry state, is about 78.50 kms. There is one Hydrological Observation Site on this stream at **Kumarapalayam** being operated by Central Water Commission.

THE PONNAIYAR

The Ponnaiyar Basin is the second largest interstate East flowing river basin among the 12 basins lying between the Pennar and Cauvery basins. It covers a large area in the state of Tamil Nadu besides the areas covered in the states of Karnataka and Andhra Pradesh. It lies between East longitude $77^{\circ} 33'$ to $79^{\circ} 47'$ and North latitude $11^{\circ} 45'$ to $13^{\circ} 30'$. The Basin is bounded on the North -West and South by various ranges of the Eastern Ghats like the Velikonda Range, the Nagari hills, the Javadu hills, the Shevaroy hills, the Chitteri hills and the Kalrayan hills and in the East by the Bay of Bengal.

The Ponnaiyar drains an area of 16,019 Sq Kms out of which nearly 77 percent lies in Tamil Nadu. The State wise distribution of the drainage area is as follows:

Name of State	Drainage Area (Sq.Kms)	Percentage of Total
Karnataka	3,530	22.0
Andhra Pradesh	210	1.3
Tamil Nadu	12,279	76.7
Total	16,019	100.0

The Ponnaiyar or the Dakshina Pinakini River rises near Hongashenhalli village at an elevation of about 900 m above m.s.l at North latitude $13^{\circ} 25'$ and East longitude $77^{\circ} 58'$ in the Kolar district of Karnataka state. From its origin, the river Ponnaiyar generally flows in the Southern direction for a length of 79 km. through Kolar and Bangalore districts of Karnataka before entering the Dharmapuri district of Tamil Nadu. The river flows another 247 Kms generally in the South-Easterly direction in the districts of Dharmapuri, Vellore, Tiruvannamalai, Cuddalore and Villupuram. The river then flows in Easterly direction below the Tirukoyilur anicut for another 70 Kms before finding its way into Bay of Bengal. The river Ponnaiyar branches into two, the Gadilam and the Ponnaiyar below the Tirukoyilur anicut. The Gadilam joins the Bay of Bengal near Cuddalore and the Ponnaiyar near the Union Territory of Pondicherry. On its way, the river receives a number of small streams and rivulets. . Central Water Commission is operating 3 Hydrological Observation sites on this stream at **i) Gummanur, ii) Vazhavachanur and iii) Villupuram**. While the Site Gummanur is situated up-stream of Krishnagiri Reservoir the sites Vazhavachanur and Villupuram are operating downstream of Sathanur reservoir.

THE VELLAR

The basin is located between Ponnaiyar and Cauvery basins. The Vellar river rises at an elevation of 900 m near the village of Tumba in the Chittori hills, of the Eastern Ghats in the Salem district of Tamil Nadu. It flows generally in an Easterly direction for a total length of 210 Km in the Salem and Cuddalore districts in Tamil Nadu and finally out falls in to the Bay of Bengal near Porto Nova in Cuddalore district. The Gomukinadhi and Manimukthanadhi are the important left tributaries and Swetanadhi and Chinnar are the right tributaries of the Vellar. The Vellar drains an area of 8,922 Sq.Km. One Hydrological Observation site at **Kudalaiyathur** is located on this stream.

THE VAIGAI

The Vaigai basin is an important basin among the 12 basins lying between the Cauvery and Kanyakumari. This basin is bounded by the Varushanadu hills, the Andipatti hills, the Cardaman hills and the Palani hills on the West and by the Palk strait and Palk Bay on the East. This basin is divided into two major topographical divisions namely (i) the hilly areas and (ii) the plains. The basin is elongated in shape and drains into the Palk Bay. The Vaigai drains an area of 7,741 Sq.Km, which entirely lies in the state of Tamil Nadu.

The Vaigai river rises on the Eastern slopes of the Varushanadu hills at an elevation of 1,200 m above m.s.l near Kottaimalai in the Madurai district at North latitude 9° 32' and East longitude 77° 23' and flows in the Northerly and North-Easterly directions up to its confluence with the Varahanadi and then takes a turn towards the East and South-East to flow through Madurai, Sivagangai and Ramanathapuram districts. After traversing for about 258 Km, the river Vaigai discharges into Ramnad big tank and some other tanks. The surplus water from the tanks finally discharges into the Palk Bay near Mandapam. On its way, the Vaigai receives two important tributaries namely, the Suruliyar and the Manjalar on its left bank, besides a large number of small streams and rivulets. The river has been dammed down stream of its confluence with the Suruliyar.

The Suruliyar and the Manjalar, the two important left bank tributaries together account for nearly 20 percent of the total Catchment area of the Vaigai. The Suruliyar, the principal tributary of the Vaigai also rises in the Eastern slopes of the Varushanadu hills and flows in the North and North-Easterly direction. It receives Theniar on its left bank, just before its confluence with the Vaigai. The Manjalar another major tributary rises in the Palani hills and flows generally in the Easterly direction before joining the Vaigai below the Vaigai dam. The Manjalar is joined by the Marudhanadhi on its left bank before joining the Vaigai. The Vaigai also receives another minor tributary namely, the Varahanadi on its left bank below the Vaigai dam. The Catchment area, length and elevations at source of the important tributaries are given below.

Name of the River	Bank	Elevation at source above m.s.l (M)	Length (Km)	Catchment Area (Sq.Km)
Manjalar	Left	1,948	40	375
Suruliyar	Left	1,628	60	1,210
Varahanadi	Left	2,502	40	380

Central Water Commission is operating **THREE** Hydrological Observation Stations on this basin i.e at **Paramakudi & Ambasamudram** on R-Vaigai and other at **Theni** on R-Suruliyar, a tributary of R-Vaigai.

THE VAIPPAR

The Vaippar river rises on the Eastern slopes of the Varushanadu hill ranges of the Western Ghats near Sivagiri in Thirunelveli district in Tamil Nadu at an elevation of about 900 m. It flows generally in an Easterly direction for a length of about 125 km through Thirunelveli, Virudhunagar and Tuticorin districts in Tamil Nadu and joins the gulf of Mannar near Kalattur. The river basin is located on South of Vaigai. It drains a total Catchment area of 5,069 Sq.Km. The Catchment area lies entirely in Tamil Nadu. The Arjunanadhi and Vijayanadhi are the important tributaries. Both the tributaries are left tributaries. There is one Hydrological observation Station at **Irrukkankudi** on this stream operated by Central Water Commission.

THE TAMBRAPARANI

The Tambraparani river rises on the Eastern slopes of the Western Ghats at an elevation of about 1,400 m at North latitude $8^{\circ} 46'$ and East longitude $77^{\circ} 15'$ near Alwarkurichi village in Thirunelveli district of Tamil Nadu to flow in a generally Easterly direction for a total length of 130 km and join the gulf of Mannar. The Chittar and Manimuthar are the important left and right bank tributaries of the Tambraparani. The Tambraparani drains an area of 5,482 Sq.Km. Two Hydrological Observation Stations are being operated by Central Water Commission one on R- Tambraparani at **Murappanadu** and the another at **A.P.Puram** on R-Chittar, a tributary of of R- Tambraparani.

1.3 CLIMATIC CHARACTERISTICS

The normal annual rainfall in the above 11 basins varies from region to region. The coastal areas of the basins get heavier rainfall than the Western parts. In the basins Swarnamukhi, Palar & Ponnaiyar, the rainfall decreases from 1270 mm in the coastal region to 762 mm in the Western parts. In the Pennar basin, it decreases from 988 mm in the coastal region to 508 mm in the Western parts.

As the basins mentioned above are subject to tropical climate, the temperature varies with season. The mean maximum temperature in the month of May varies from 41° C in Kadapa region of Pennar basin to 30° C in the

Palar & Ponnaiyar basin. The mean minimum temperature varies from 17° C in Pennar basin to 25° C in Palar & Ponniyar basins.

The Climatic features of Basins Pennar, Palar, Vaigai and Swarnamukhi are given below in some detail.

THE PENNAR

The normal annual rainfall decreases from 988 mm at Nellore in the Eastern end of the basin to about 508 mm at the Western end. A large part of the basin lying in the state of Karnataka and Anantapur, Kurnool and Kadapa districts of Andhra Pradesh receive less than 762 mm rainfall. Parts of Nellore and Kadapa districts, adjacent to the seacoast receive some rain from the retreating monsoon also.

The entire basin is practically dry and the interior of the basin, especially Kadapa district, experiences severe heat during hot weather which normally extends from the middle of February to the middle of June. The mean of maximum and mean of minimum temperatures at places like Kadapa and Arogyavaram are 40.9° C and 16.9° C respectively. In the cool weather the mean of maximum and the mean of minimum temperatures are 34.6° C and 15.2° C respectively.

THE PALAR

In this basin, rainfall varies from region to region. The coastal districts in the basin get heavier rainfall than the Western parts. The rainfall decreases from 1,270 mm at the Eastern extremity of the basin to 762 mm at the Western extremity. This basin receives rainfall from both the monsoons i.e., during the South -West monsoon Western part of the basin gets rain, whereas, the Eastern parts receive rainfall during the North -East monsoon.

As the basin is subject to tropical climate, the temperature of the basin varies with the season. In the month of January the mean temperature varies from 22.5° to 25° C and in the month of May, the mean temperature varies from 30° C to 32.5° C

THE VAIGAI

The rainfall in this basin varies from region to region. The rainfall decreases from 1,270 mm at the Western extremity of the basin to 635 mm at the Eastern extremity and the average rainfall is about 850 mm.

As this basin is situated in the rain shadow area of the Western Ghats, it receives very little rainfall during South-West monsoon in the hilly region. At times, the basin receives heavy rainfall in the coastal regions whenever intensive depression is formed in the Bay of Bengal during North-East monsoon.

This basin is subject to a tropical climate and as such the temperature varies with the region. In the hilly Western part, variation of temperature during the year is less, whereas in the plains the mean temperature is around 25° C in January and 27.5° C to 35° C in May.

THE SWARNAMUKHI

The average annual rainfall in the Swarnamukhi basin decreases from 1270 mm at the Eastern extremity of the basin to 762 mm at the Western extremity. The North- East monsoon sets in the month of October and withdraws by the end of November. The mean of maximum temperature in the catchment varies from 30° C to 32° C and minimum between 22.5° C to 25 °C.

1.4 GEOLOGY

THE PENNAR

The basin consists mainly of red, black, sandy and mixed soil. The important rock formations are hard or crystalline rocks of Archean age Dharwar Super Group, Kadapa series of rocks belonging to Proterozoic age, soil comprising of Guvalacheruvu quartzite, Vempally dolomites, lime stones and shales of Papagni series and Cheyyeru series. The Nallamala series comprise of cumbum shales, which are metamorphosed to slates and phyllites.

THE PALAR

In the upper reaches of the basin it is predominantly covered by granite gneisses, Gondwanas, Kadapa formations of Archaeans belonging to Dharwarian system with basic intrusives. The central portion of the catchment is covered by archaean crystalline hard rock and sedimentary rocks. Alluvial deposits are found all along the coastal belt and Palar River course comprising of marine and riverine deposits. Due to uplift of landmasses and tectonic activities, the archaean dharwarian hard rocks were subjected to deformation into folds and faults and also resulted in shifting of river courses in basin area.

THE VARAHANADI

Major portion of the basin area (84%) comprises of hard crystalline rocks of Archaean groups viz. granulite, biotite, shattered gneiss, magnetite quartzite, pyroxene granulite and charnockite. The general foliation of the rocks are in NNE to NE direction with dip towards SSE to SE direction with an angle of 55° to 80°. The remaining portion of the basin area (16%) consists of sedimentary formation. The marine sediments existing along the coastal area comprises of tidal flats, mudflat and beach/sanddune deposits.

THE PONNAIYAR

The Ponnaiyar basin is covered by the Archaean rocks such as Pyroxene granulites, Quartzite, Ferruginous Quartzite, Amphibolites, Gneiss and Hornblende biotite gneiss with younger intrusive of Pegmatite and Dolerite in the central and western parts . The eastern part is covered by the cretaceous formation of argillaceous, calcareous sandstone with clay and limestone. The tertiary formation is of Cuddalore sandstones and the recent formation of river alluvium and coastal alluvium.

THE VELLAR

Vellar river basin comprises of crystalline rocks of Archaean age on the western part of the basin and sedimentary formation of Cretaceous, Tertiary and Quaternary ages on the eastern part. The oldest rock members, are pyroxenites, amphibolites, gneisses, granulites, quartzites, migmatite. Later, charnockites, granites and younger intrusives of pegmatite occur within the older rocks. The general trend of foliations are NE-SW with variation to East-west and dipping South-east North-west, showing minor flexures in the folding in several locations . 82 % of the basin area comprises of hard rock terrain. 18% of the area is underlain by Cretaceous argillaceous sandstone and shell limestone, Tertiary Cuddalore sandstones and Quaternary alluvium.

THE VAIGAI

Vaigai river basin consists of hard crystalline rock masses of archaean age for the most part (74%) on the western portion and sedimentary rocks of upper gondwana, tertiary and quarternary age on the eastern portion (26%). The archaean formations are metamorphosed rocks such as cordierite, sillimanite bearing gneisses, quartzites, calc, gneisses and granulites. They are associated with basic charnockites and pink granites. Pegmatites intrude in the charnockites, pink granites and gneisses at several locations as intrusive body. Pyroxenite intrusions are also found to occur at fewer places. These archaean formations are well exposed on the western and central area of the vaigai river basin. The high rising mountains composed of the above mentioned rock types have yielded material due to weathering and erosion and they were deposited in the valley and intermontane basins as valley filled sediments and are of quaternary age. On the eastern portion from manamadurai to the bay of bengal, rocks of upper gondwana, teritiary alluvium and coastal alluvium are spread over the archaean formations unconformably. Aeolian sands are also found to occur in isolated pockets in the cumbum valley and coastal areas.

THE VAIPPAR

The Vaippar river basin comprises of the Archaean group of hard rocks viz. charnockite, complex gneiss, limestone and basic metamorphic rocks, young intrusive rocks like pegmatite, quartz veins and sub recent alluvium. Major part of the Vaippar basin except in the west is occupied by complex gneiss like hornblende gneiss, mica gneiss and pink & grey granite gneiss. The next important group is the charnockite series, spread over the western part of the basin. The alluvium extends around 200 meters on either side of the Vaippar river in the eastern part of the basin. Coastal alluvium exists parallel to the coast upto a distance of 4 km from the sea.

THE TAMBRAPARANI

Geology of Tamiraparani basin comprises of crystalline rocks of Archaean age on the western portion and sedimentary formation of Tertiary and Quaternary ages on the eastern coastal area. Nearly 90% of the basin area is covered by the crystalline rocks such as metamorphosed rocks (gneisses and charnockites). Sedimentary formations of Tertiary age consists of calcareous tufa sandstones and shell limestones. Quaternary formations are laterite, kankar, shell limestone, alluvium, theri sands and silts. The windblown red sanddunes of Sawyerpuram theri and Kudiraimozhi theri occur in the northeastern and southeastern part of the basin respectively.

1.5 DESCRIPTION OF THE WATER STORAGE/ DIVERSION STRUCTURES

There are as many as 115 completed/on going important major, medium and minor projects across the various streams and their tributaries in all the East flowing rivers basins out of which there are 34 completed/ongoing projects across the Pennar and its distributaries alone. Mylavaram and Somasila are the two important projects in Pennar Basin. The details of projects in Gundlakamma, Pennar, Palar, Ponnaiyar, Vellar, Vaigai, Vaippar and Tambraparani basins are given at **Annexures - II to IX** respectively. The Reservoir data has been taken from the CWC publication 'Storages in river basins of India' (1990), History of irrigation development in Tamil Nadu published by Indian National Committee on Irrigation and Drainage (MOWR), New Delhi (March 2001) and partly collected from the irrigation department, Governments of Andhra Pradesh, Karnataka & Tamil Nadu.

A map showing the location of CWC Hydrological Observation Stations and some of the completed/ongoing Projects is enclosed as **Plate – XIII**.

Salient features of some of the Major projects are given below:

THE PENNAR

MYLAVARAM: This is a completed medium irrigation project across Pennar rivers located near Mylavaram town of Jammalamadugu taluk of Kadapa district in Andhra Pradesh. The project envisages an earthen dam with a gross storage capacity of 283 M.cum. The two canal systems namely, Mylavaram reservoir North and South canals off take from the dam have an irrigation potential of 75,000 acres spread over the Jammalamadugu, Proddatur and Kamalapuram taluks of Kadapa district and Koilkuntla and Allagadda taluks of Kurnool district. The total length of the dam is 2,850 m with top width being 6 m. The height of earthen dam is 24.3 m. The Pennar River has a catchment area of 19,197 Sq.Km up to the dam site.

SOMASILA: This is a major irrigation project under construction across the Pennar river situated near Somasila. This project with a storage capacity of 463 M.Cum in stage-I and 2,093 M.Cum in stage-II is having four canal systems namely, North feeder canal, South feeder canal, Kavali canal and Kanpuru canal and is planned to be completed in two stages.

The length and height of the dam by the completion of second stage are 766.6 m and 40 m respectively. The top width of the dam is 6.86 m in the masonry structure and 9.4 m in the earthern bund.

THE KALINGI

At present there are two medium irrigation projects in this basin namely, (1) Kalingi Reservoir and (2) Thanyali Anicut which irrigate an area of 4,650 acres and 10,000 acres respectively.

THE PALAR

At present there are about 8 completed anicut type structures in the Palar catchment. The salient features of the two important structures, namely, the Palar anicut and the Poini anicut are as follows.

PALAR ANICUT: This anicut is situated across the Palar River, 7 Km below the town of Arcot. The project comprises of (i) an anicut 796 m long and 1.8 m high of brick and rough stone in chunam founded on two rows of circular wells, (ii) a head sluice of 16 vents 2 m each on left bank (iii) two head sluices on the right bank and (iv) the canal system, comprising four channels, two on either side. The water from the channels is led to the tanks, which in turn irrigates an area of about 33,600 hectares. This anicut was commissioned in 1858.

POINI ANICUT: The Poini anicut is located across the river Poini about 19 Km above its confluence with the Palar and about 4 Km South of Poini village in Vellore district. It is 216 m long and 2.4 m high and has canal systems on either side to irrigate an area of 9,690 hectares. This project was completed in 1897.

THE PONNAIYAR

At present there are eleven completed structures either reservoirs or weirs in the Ponnaiyar catchment. The salient feature of the two important structures, viz. Krishnagiri reservoir and Sathanur reservoir are given below.

KRISHNAGIRI RESERVOIR: This reservoir is located on river Ponnaiyar near Krishnagiri in the Dharmapuri district of Tamil Nadu. It intercepts a Catchment area of about 5,428 Sq.Km. The project consists of 712.93 m long earthen dam and 277.67 m long masonry dam with a maximum height of 29.26 m with two canals taking off from either side. The reservoir with a storage capacity of 66.1 M.cum. irrigates an area of about 3,642 hectares. This project was commissioned in the year 1958.

SATHANUR RESERVOIR: This reservoir is located on river Ponnaiyar near Tiruvannamalai in the Tiruvannamalai district of Tamil Nadu. The project consists of 359.66 m long earthen dam and 426.72 m long masonry dam with a maximum height of 44.81 m. The reservoir intercepts a Catchment area of 10,825 Sq.Km and has a storage capacity of 228.91 M.cum. Two canals take off on either side of the river are planned to irrigate an area of 18,210 hectares. This project was also commissioned in the year 1958.

THE VAIGAI

VAIGAI RESERVOIR: The Vaigai reservoir is located on river Vaigai near Periyakulam in Madurai district of Tamil Nadu. It intercepts a catchment area of 2,253 Sq Km. The project consists of 3,243 m long earthen dam and 232 m long masonry dam with a maximum height of 33.83 m. This reservoir with a gross storage capacity of 194.78 M.cum can irrigates an area of 9,650 hectares. The project was commissioned in the year 1959.

MANJALAR RESERVOIR: The Manjalar reservoir is located on river Manjalar near Periyakulam in Madurai district of Tamil Nadu. The reservoir consists of an earthen dam of length and height of 1,004.62 m and 28.33 m respectively. It intercepts a catchment area of 106.48 Sq.Km. The gross capacity of the reservoir is 13.48 M.cum and irrigates an area of 810 hectares. The project was commissioned in the year 1967.

MARUDHANADHI RESERVOIR: The Marudhanadhi reservoir is located on river Marudhanadhi near Dindigul in Dindigul district of Tamil Nadu. The project consists of an earthen dam of length and height of 786.38 m and 27.43 m respectively. It intercepts a Catchment area of 53.35 Sq.Km. The reservoir with a gross storage capacity of 4.93 M.cum is irrigating an area of 1,527 hectares. The project was commissioned in the year 1979.

2 STREAM FLOW DATA

2.1 METHODOLOGY

The standard method being adopted at all the sites for collecting the data is explained briefly as under:

Three lines of staff gauges are maintained at all the sites for observing water levels and surface slope. All these levels are connected to GTSBM value. The Water Level at Central Gauge line is used for arriving at a Stage-Discharge relationship at each site.

Velocities are recorded by using current meters as per IS:3918-1966 (reaffirmed -2001) by boat with cable way or with outboard engine at higher stages and by wading at lower stages. Where the facility of boats is not available, Discharge measurements are carried out from the near by bridges.

Observed data at the field station is entered / computed in different formats prescribed for the purpose and later processed at various levels using SWDES and HYMOS Software before publishing in the Water Year Book.

On the days when the discharge observations are not conducted due to holidays or any other reasons, the same have been estimated from the established Stage- Discharge curve of the site of the current year against 0800Hrs stage. Some of the observations, which do not fall within the established curve due to some errors in observation or wind effect etc., are discarded and discharges are again estimated from the established Stage- Discharge curve against 0800H stage.

2.2 DATA AVAILABILITY

The Central Water Commission is conducting Hydrological Observations at **27** stations spread over four states of Karnataka, Tamil Nadu, Puducherry and Andhra Pradesh and daily discharge data collected at all these sites for the year 2016-17 has been finalized and presented in this volume in the form of Water Year Book.

The Data presented in this book has been collected by the three Divisions viz., Southern Rivers Division, Coimbatore, Hydrology Division, Chennai, and Lower Krishna Division, Hyderabad.

2.3 EXPLANATORY NOTES

The explanatory notes described here under are designed to assist in the interpretation of hydrological parameters contained in the data presented subsequently. The notes are, therefore valid in so far as data presented in this book is concerned.

- i) Water year ranges from June 1st of one calendar year to May 31st of the next calendar year and covers one complete hydrological cycle.
- ii) Discharge is given in Cubic meters per second.
- iii) Discharges given are daily observed discharges commencing at 08.00 hrs.
- iv) Discharge indicated with asterisk (*) mark is estimated discharge
Corresponding to stage at 08.00Hrs.
- v) The ZERO R.L. of a gauge is a datum level fixed for a given site, which is generally kept 1 m or 2 m lower than the lowest water level recorded in a perennial stream. In a non-perennial stream, it is kept 1 m or 2 m lower than the lowest bed level of the stream.
- vi) Discharges are rounded to :
 - a) nearest full integer when more than 1000
 - b) nearest first decimal figure when between 100-999.
 - c) nearest two decimal figure when between 10-99.
 - d) nearest three decimal figure when less than 10.
- vii) Maximum and Minimum discharge are taken from daily observed/estimated discharge.
- viii) Run off in mm is the notional depth of water in millimeters over the catchments, equivalent to annual runoff calculated at the discharge measurement station. It is computed using the relation

$$\text{Run off (mm)} = \frac{\text{Annual runoff (M Cum)}}{\text{Catchment area (Km}^2\text{)}} \times 1000$$

- XI) Peak and lowest flow correspond to the highest and lowest water levels recorded during the period of record.
- X) Measuring Authority refers to the field division responsible for the Operation of the Gauging Stations.
- xi) The Gauging Station Code Number is a unique seven-column alphanumeric reference number, which facilitates storage and retrieval of flow data in data bank. The first column is identifier of either an integral river basin or for convenience a region having several continuous river catchments. This is followed by a column that identifies an independent river system, which either have one or more outlets to the sea or crosses international border to enter another country. The third, fourth and fifth column spaces denote first, second and third order tributaries respectively from the mouth upstream. The sixth and seventh column spaces indicate the location of the Gauging Station in one of 225 slots earmarked on the river. The blank column spaces are filled by zero.

3 HYDROLOGICAL DATA

3.1 HISTORY SHEET

The History sheets enclosed give the description of the Hydrological Observation Stations such as Site name, State, District, River basin, Catchment Area, Latitude/Longitude Etc.,

3.2 DATA SHEET

In this sheet the observed/estimated daily Stage-Discharge tables are shown month-wise together with Ten-Daily, Monthly and Annual summaries. Dates of occurrences of Peak and Minimum Discharges and the corresponding water levels right from the inception of the site up to the current year are also shown in a separate sheet. Graphs showing three highest flood peaks- water Level v/s Time that occurred during the current water year are also generated and included in the Year Book.

3.3 CHARTS/MAPS

The year wise total Annual Run-Offs of the site from the year of inception up to the current year is reflected in the bar charts. The Histogram/Hydrograph of monthly average discharge values are depicted in two separate pie charts one for the current year and the other for all the years from year of inception up to the previous year. The Pre-monsoon and Post-monsoon Cross Sections of each Site are also inserted.

4 SEDIMENT DATA

There are twelve sediment Observation Stations under this basin. Sediment & Bed material data being the part of Water Year Book, is also included in this volume.

4.1 SOURCE OF INFORMATION

Suspended Sediment observation stations for which data for 2016-17 is presented in this volume are maintained by the Hydrology Division, Chennai, Southern Rivers Division, Coimbatore & Lower Krishna Division, Hyderabad and the names of the stations are given below:

- | | |
|----------------------------|--------------------------------|
| 1. Gundlakamma at Marella | 7. Ponnaiyar at Vazhavachanur |
| 2. Sagileru at Nandipalli | 8. Ponnaiyar at Gummanur |
| 3. Pennar at Chennur | 9. Vaigai at Paramakudi |
| 4. Kunderu at Alladupalli | 10. Suruliyar at Theni |
| 5. Swarnamuki at Naidupeta | 11. Vaigai at Ambasamudram |
| 6. Kalingi at Sullurpet | 12. Tamraparani at Murappanadu |

4.1.1 OBSERVATION TECHNIQUE

Suspended sediment observations are conducted daily along with the discharge observations

Sampling is done from boat or by wading. The Punjab type bottle sampler is used for collecting sediment samples. The sediment samples collected from flowing channels are analysed for the three grades of sediment viz. Coarse, Medium and Fine. Coarse and Medium grades are separated by sieving using standard sieves of 212 microns and 75 microns respectively and Fine grade sediment by filtration. Grade wise concentration is determined by gravimetric method.

Samples are generally collected at 0.6 depth from various verticals along the cross section of the river. These verticals are grouped into three or more composite sections for the purpose of analysis of Coarse and Medium grades of sediment. For Fine grade, the sediment samples, after removing the Coarse and Medium grade are combined into a single group and analysed. Selection of the composite sections is done in such a way so as to ensure that the discharges through each of the composite sections are nearly equal.

4.1.2 CLASSIFICATION OF SEDIMENT

Sediment is classified as Coarse, Medium and Fine according to the diameter as indicated below:

Coarse : Sediment above 0.20 mm diameter

Medium : Sediment between 0.20 and 0.075 mm diameter

Fine : Sediment below 0.075 mm diameter

The values given in the daily sediment data sheets are observed values. For non-observed days the values are either taken from Discharge – Sediment Curves or from neighborhood values.

4.2 METHOD OF PRESENTATION

The various data tables presented are generated from the validated SWDES Data base through SWDES software. Some of the features of the tables generated are briefly explained as below:

4.2.1 When the sediment samples analyzed give non-measurable sediment, it is presumed to be of “nil” value and recorded accordingly. The Table of Annual Sediment Load along with the season-wise Sediment Loads for the period from the Dt of inception up to the Last Year is generated. A bar Chart for the same but including the Sediment load for current year is also generated separately. Separate tables showing Daily observed sediment data & Pie Charts are also generated.

5.0 BED MATERIAL DATA

The Bed Material Survey and Analysis data used to be published separately as Bed material analysis data book till the year 1990. Since Bed material survey and analysis work also form a part of the sediment observation work, it was decided to publish the Sediment data and the Bed material survey and analysis data in a single volume from the year 1990-91 onwards. With the revision of format of Water Year Book, the Sediment and Bed Material data is included in the Water Year Book itself from 2006-07 and onwards.

5.1 OBSERVATION TECHNIQUES

Bed material survey is conducted at the station gauge line three times in a Water Year i.e during Monsoon, Post monsoon and Pre-monsoon seasons. Samples at the required intervals from the dry as well as the flowing part of the river bed are collected and the river cross section on the date of survey is also taken. Sampling segments are fixed as per the standard requirements, subject to a minimum of three samples. Samples from the flowing channel are collected by means of a scoop type bed material sampler. For the dry part, the bed is cleared off the vegetation etc. by removing about 10 to 15 cm. of the top layer with a scraper and a suitable pit of about 30 to 40 cm. is dug out and representative samples are collected. These samples are reduced to the required quantity by the cone and quartering process. The samples thus reduced are put into polythene covers and packed into thick cloth bags. The cloth bags are then labeled with the relevant particulars of the river and the samples are sent to the divisional laboratory for analysis.

5.2 THE ANALYSIS

The bed material samples are analyzed at the divisional laboratory for the particles size distribution in two stages. First, the sample is weighed and then placed in the top 40.0 mm dia. Sieve of a set of Sieves having diameter ranging from 0.6 mm to 40 mm. Shaking the Sieve is done with the help of a mechanical Sieve Shaker. After 10 to 15 minutes of shaking, the material retained in each Sieve is collected and weighed. The total weight of various fractions must be equal to the initial weight of the sample used for analysis. The material passing through the last 0.6 mm dia. Sieve is again analyzed by means of the Puri's Siltometer. From the result of the above analysis, Summation Curves are drawn as per the standard procedure and the mean diameter of each example is worked out. From this the Silt Factor can be calculated using the formula $f = 1.76 \sqrt{m}$ where 'm' is the mean diameter of the sample in mm. The mean diameter of the sample, maximum diameter of the sample, details of the sample collected and the general data of the river are furnished in this publication.

5.2.1 DATA OF THE SAMPLE COLLECTED

In the data of the sample collected, the RD from which the sample is collected, RL of dry bed (in case sample is collected from dry bed), RL of bed level (in case sample is collected from flowing channel), Water level, Depth of water, Segment width, Velocity at the RD and the Segment discharge on the date of sampling are furnished.

5.2.2 GENERAL DATA OF RIVER

In the general data of the river the Hydraulic mean depth, Mean velocity, Surface water slope and the discharge on the date of sampling etc. are shown.

5.2.3 BED MATERIAL COMPOSITION

Under bed material composition, the maximum size and mean size of each sample and also the maximum size and the mean size for the entire cross section for each season are recorded. The minimum size for each sample has been assumed as 0.06 mm. since this has been observed uniformly in every sample.

Annexure - I

STATEMENT SHOWING CWC HO & RAINFALL STATIONS IN EAST FLOWING RIVER BASINS

HISTOGRAM - HYDROGRAPH for Water Year : 2016-2017

Station Name : Nandalur (APB0012)
Local River : Cheyyeru

Data considered : 2013-2017

Division : Hydrology Division, Chennai
Sub-Division : PSD, Kadapa

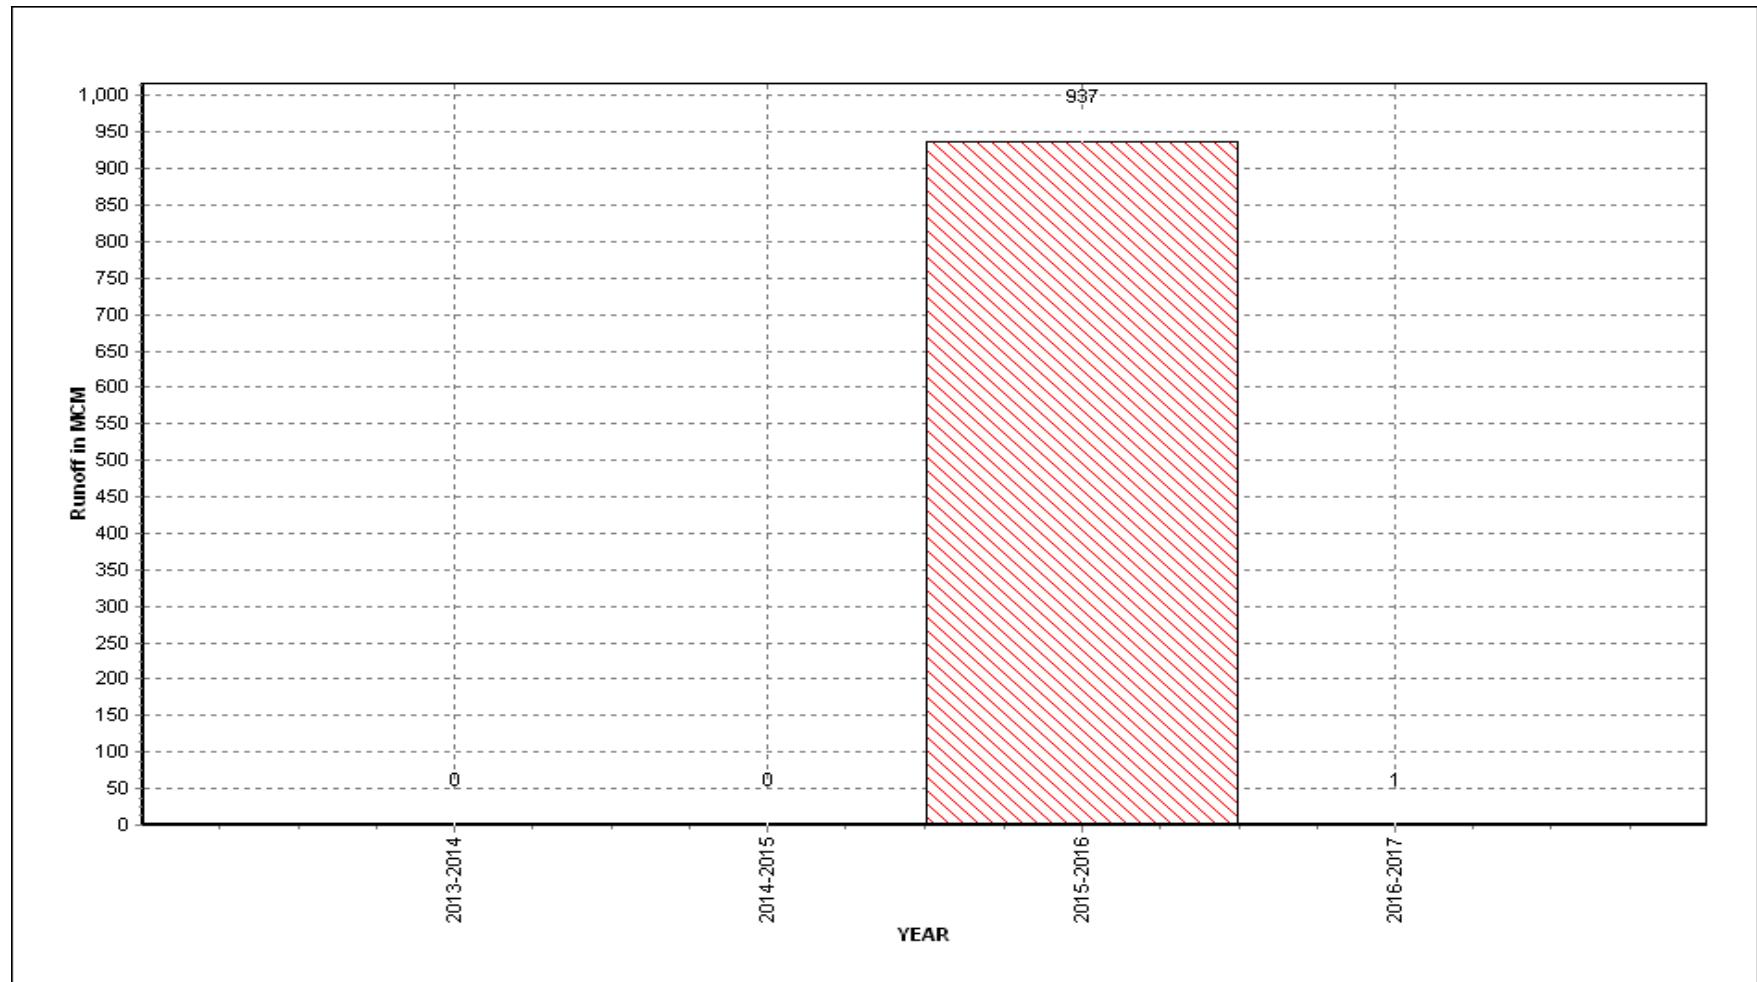

Annual Runoff Values for the period: 2013 - 2017

Station Name : Nandalur (APB0012)

Local River : Cheyyeru

Division : Hydrology Division, Chennai

Sub-Division : PSD, Kadapa

Note: Missing values have not been considered while arriving at Annual Runoff

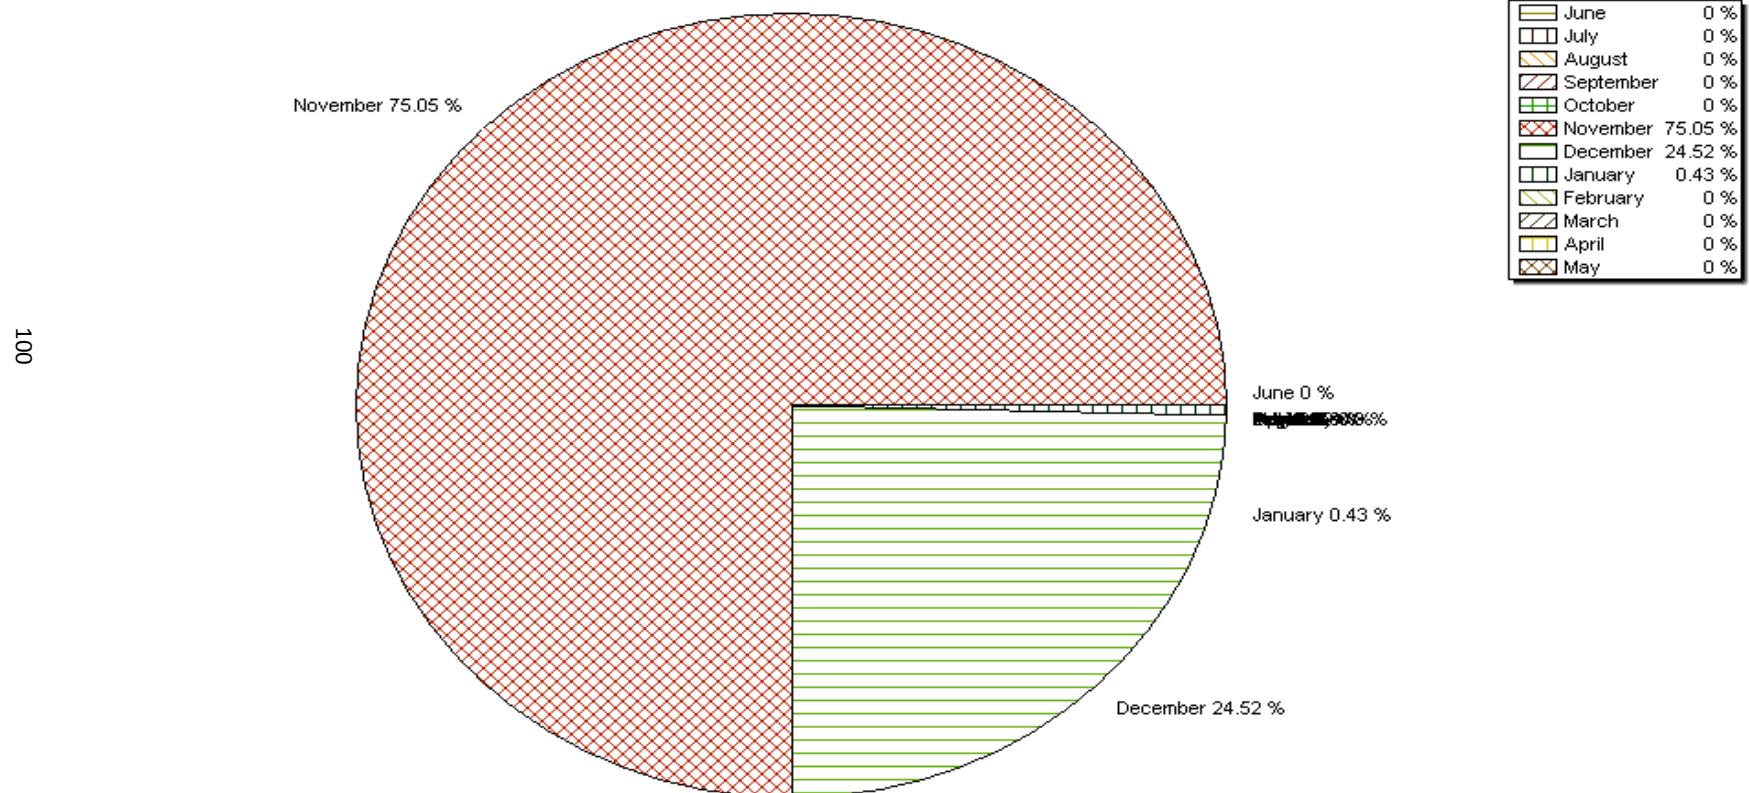

Monthly Average Runoff based on period : 2013-2016

Station Name : Nandalur (APB0012)

Local River : Cheyyeru

Division : Hydrology Division, Chennai

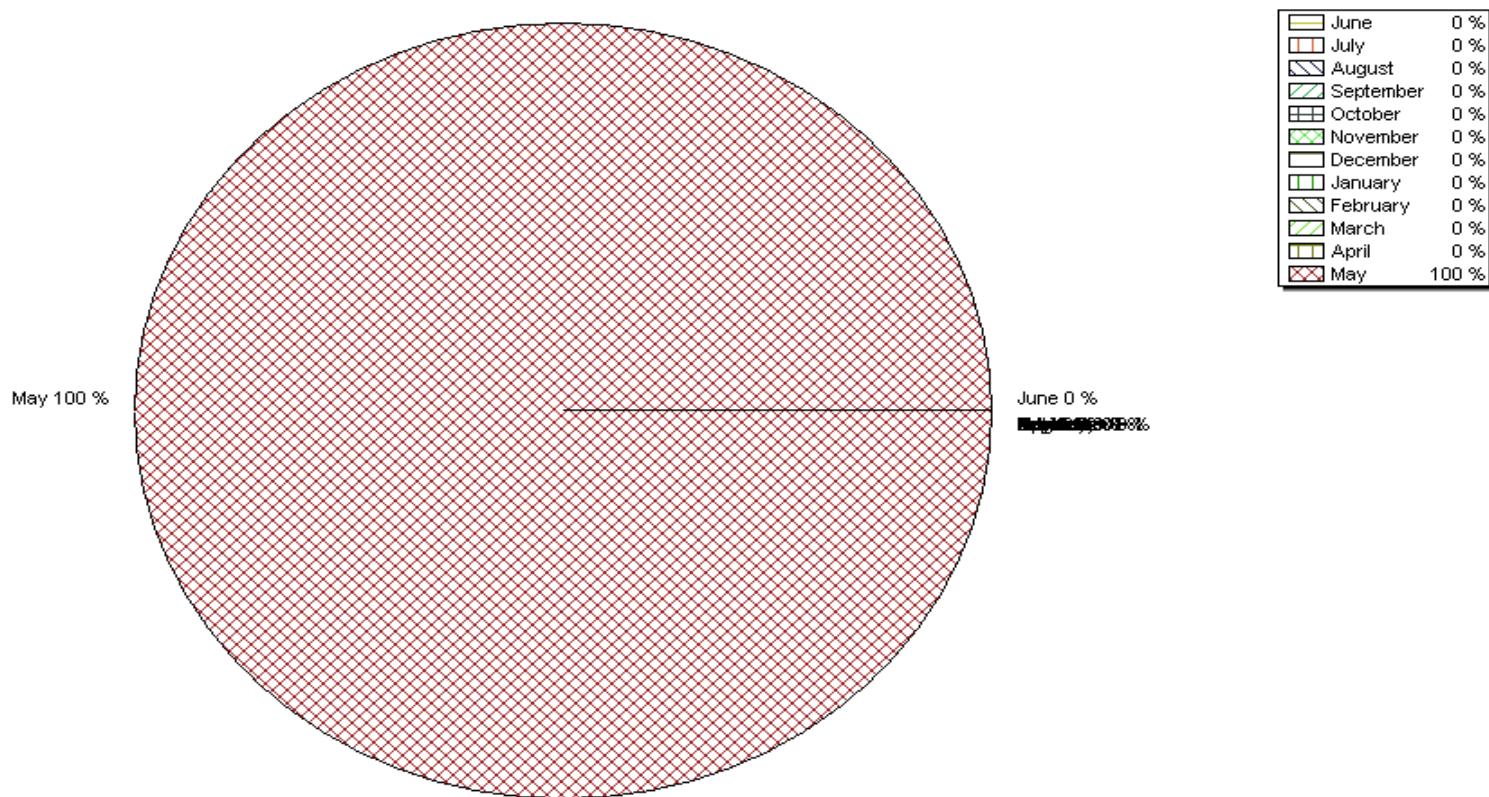

Sub-Division : PSD, Kadapa

Station Name : Nandalur (APB00I2)
Local River : Cheyyeru

Monthly Runoff for the Year : 2016-2017

Division : Hydrology Division, Chennai
Sub-Division : PSD, Kadapa

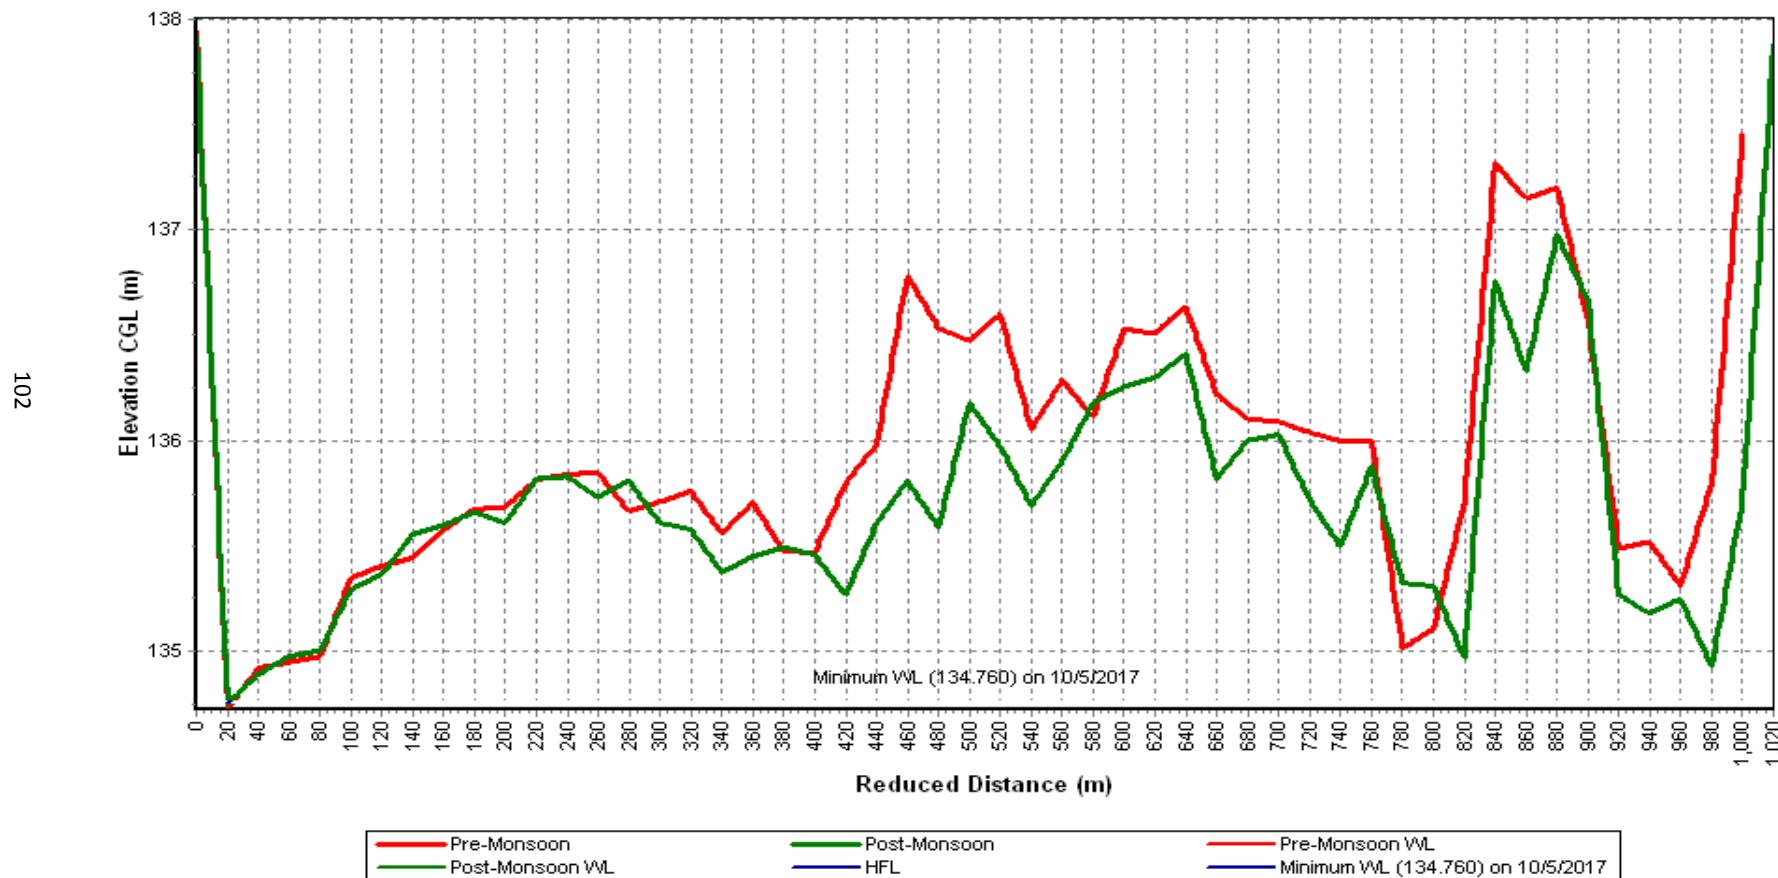

Pre-Monsoon & Post-Monsoon X-Section for Water Year : 2016-2017

Station Name : Nandalur (APP0012)

Local River : Cheyyeru

Division : Hydrology Division, Chennai

Sub-Division : PSD, Kadapa

Corres. Water Level :134.25 m

Lowest Computed Discharge = 0.720 cumecs on 16/10/2016

Corres. Water Level :134.21 m

Q:Observed/Computed Discharge in cumecs

WL:Corresponding Mean Water Level(m.s.l) in m

*:Computed Discharge

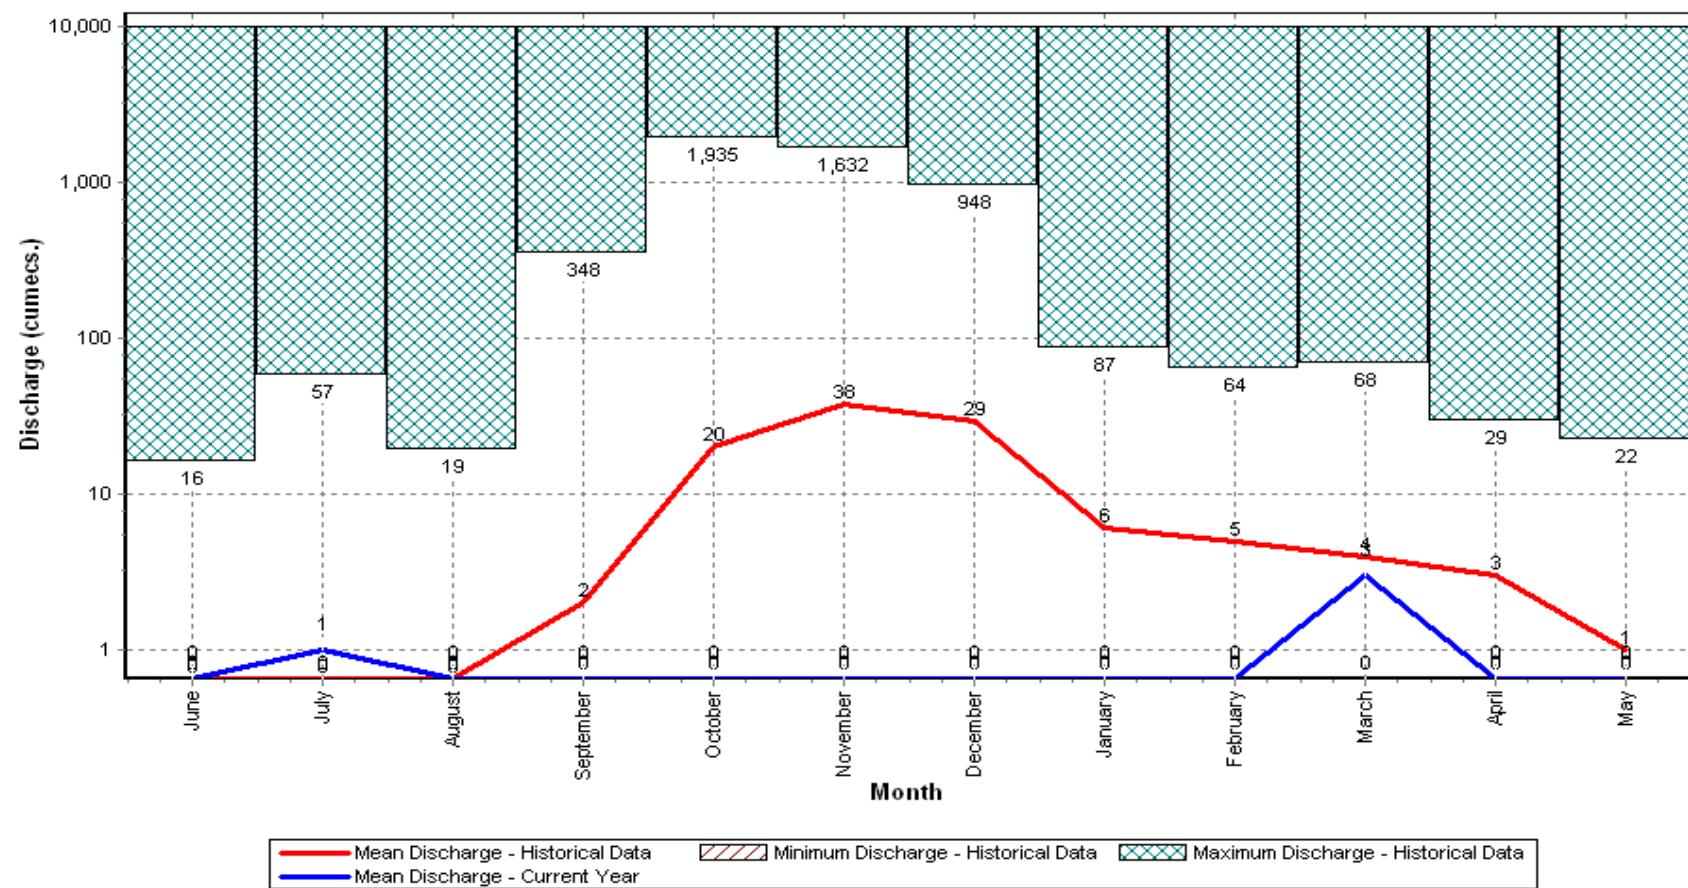

Note:Missing values ignored while arriving at Annual Runoff

HISTOGRAM - HYDROGRAPH for Water Year : 2016-2017

Station Name : VAZHAVACHANUR (CP000H2)
 Local River : Ponnaiyar

Data considered : 1978-2017

Division : Hydrology Division, Chennai
 Sub-Division : PPSD, Chennai

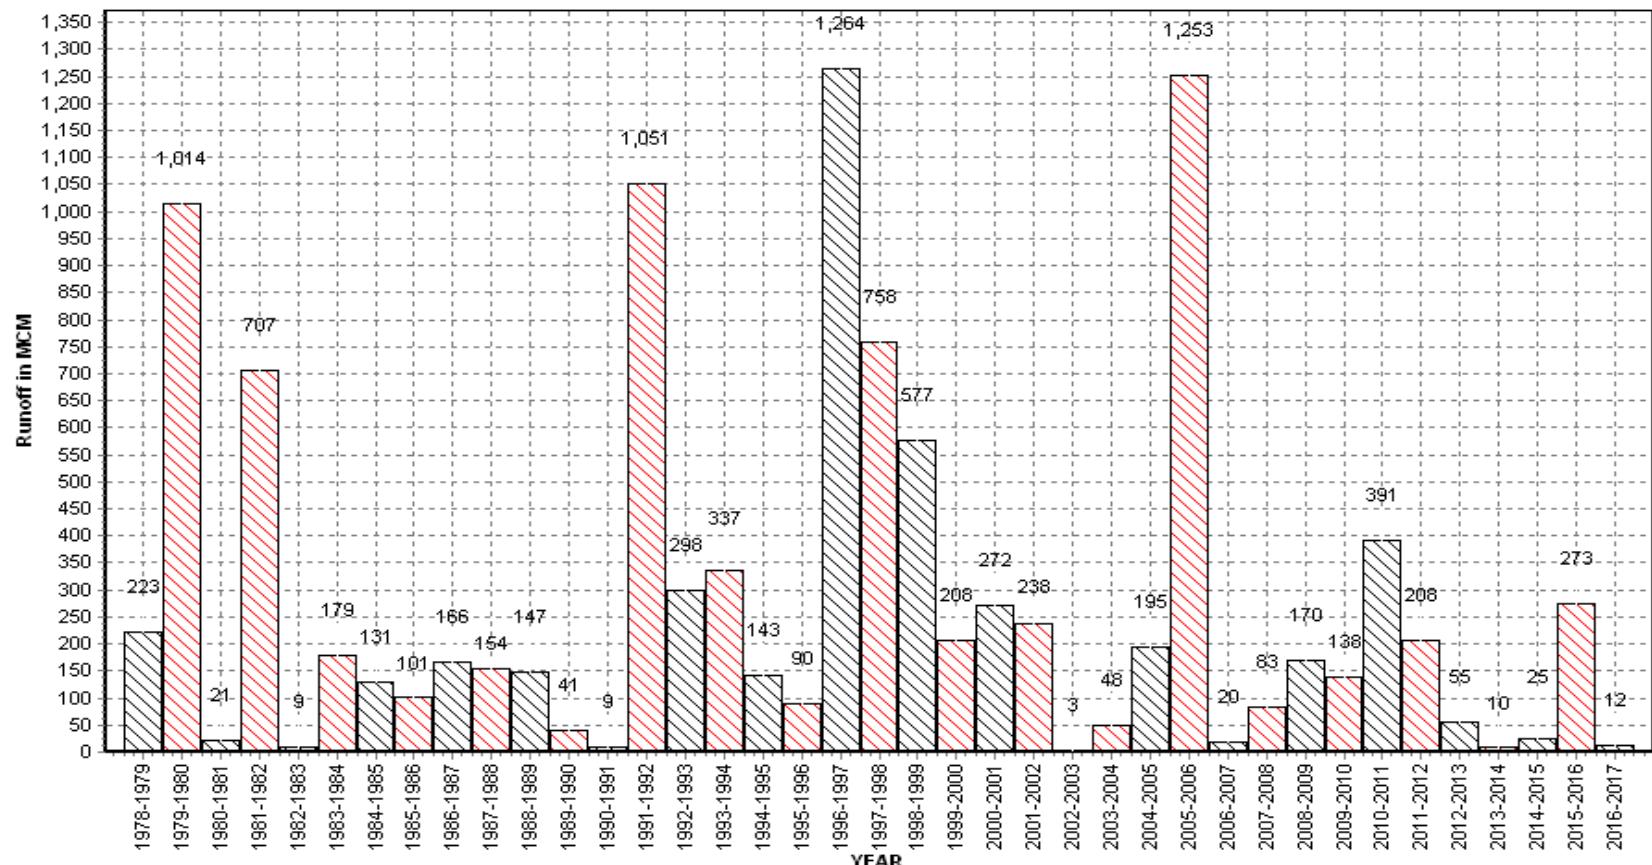

Annual Runoff Values for the period: 1978 - 2017

Station Name : VAZHAVACHANUR (CP000H2)

Local River : Ponnaiyar

Division : Hydrology Division, Chennai

Sub-Division : PPSD, Chennai

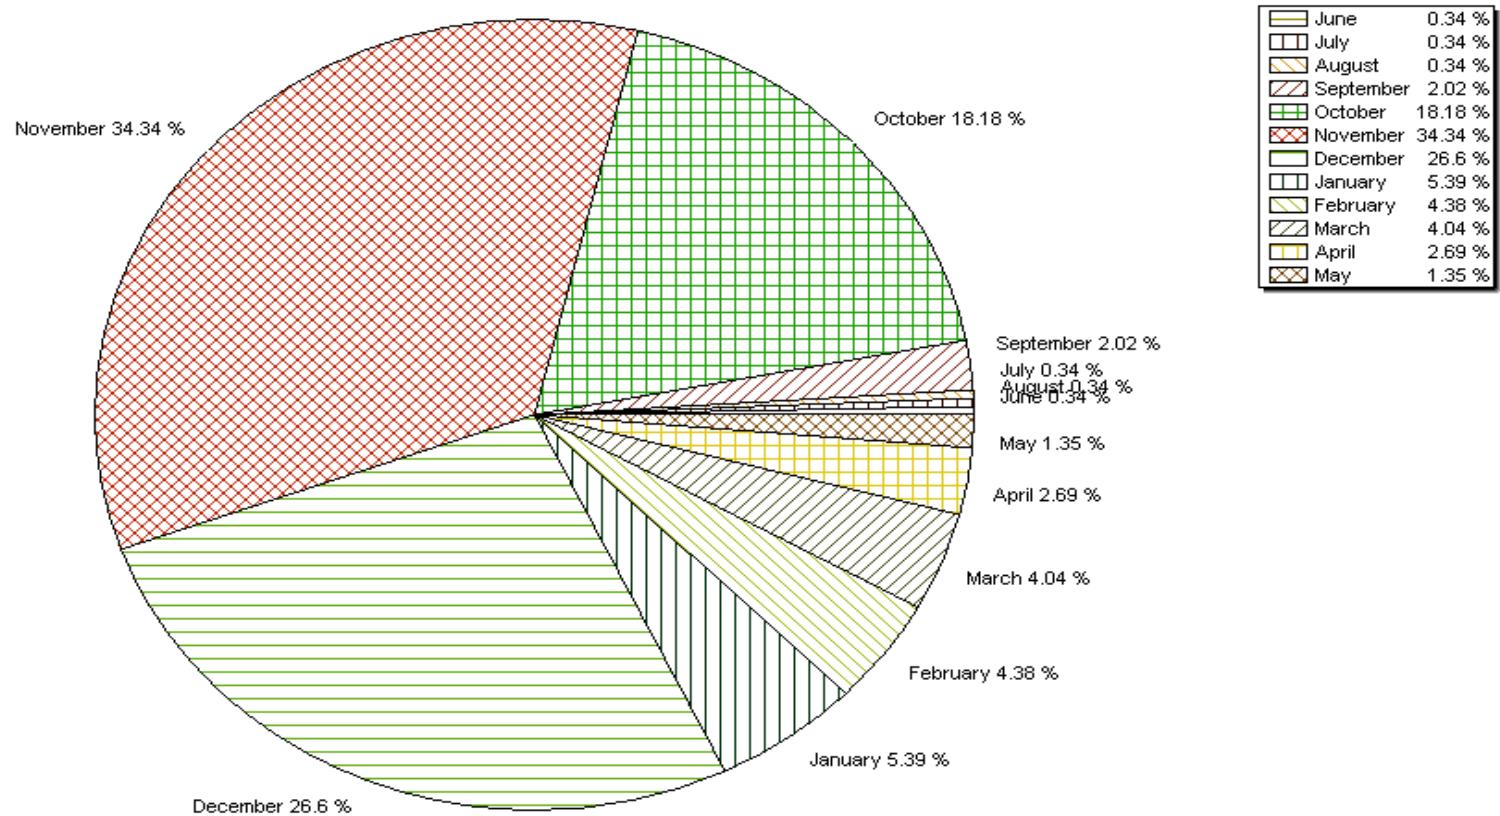

Monthly Average Runoff based on period : 1978-2016

Station Name : VAZHAVACHANUR (CP000H2)

Local River : Ponnaiyar

Division : Hydrology Division, Chennai

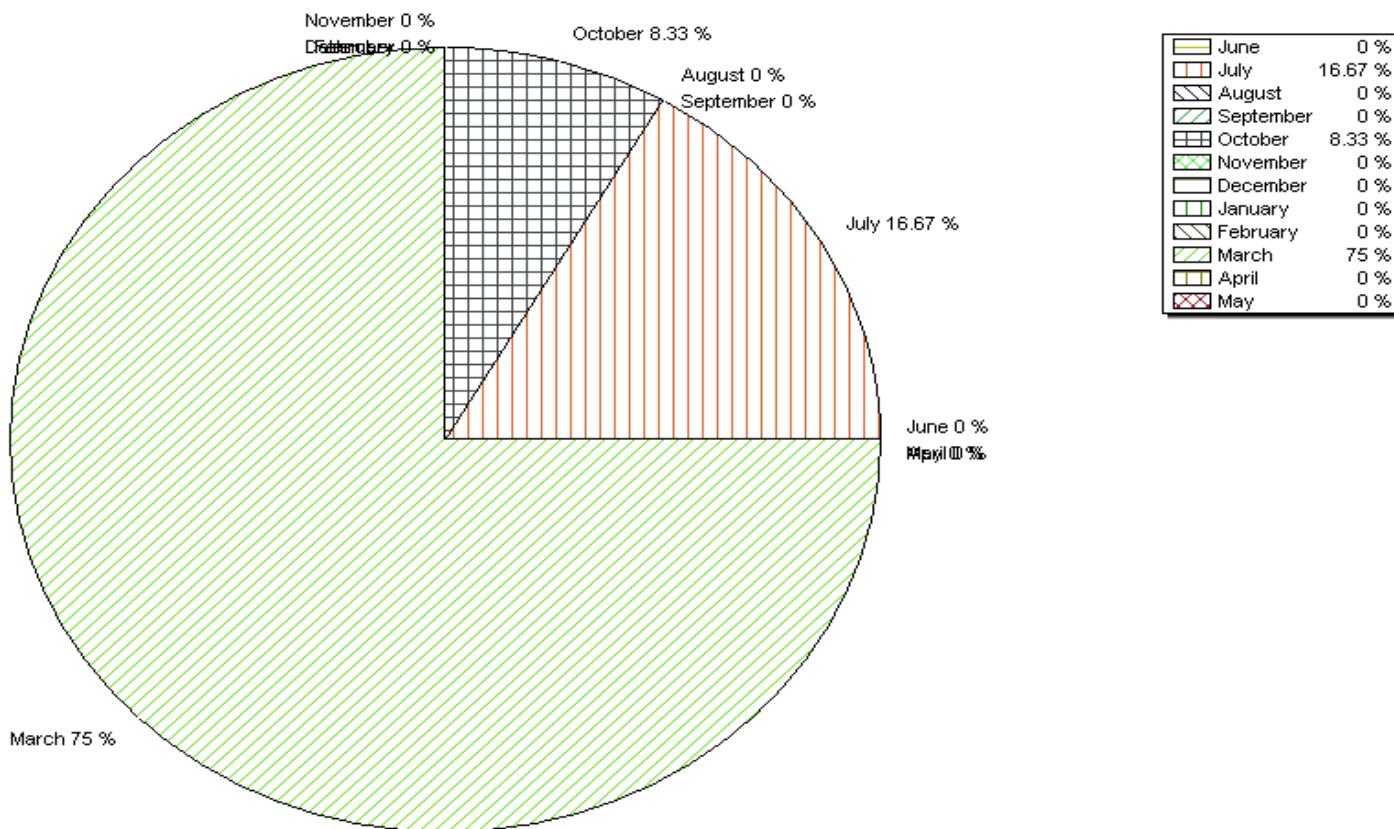

Sub-Division : PPSSD, Chennai

Monthly Runoff for the Year : 2016-2017

Station Name : VAZHAVACHANUR (CP000H2)
Local River : Ponnaiyar

Division : Hydrology Division, Chennai
Sub-Division : PPSD, Chennai

Pre-Monsoon & Post-Monsoon X-Section for Water Year : 2016-2017

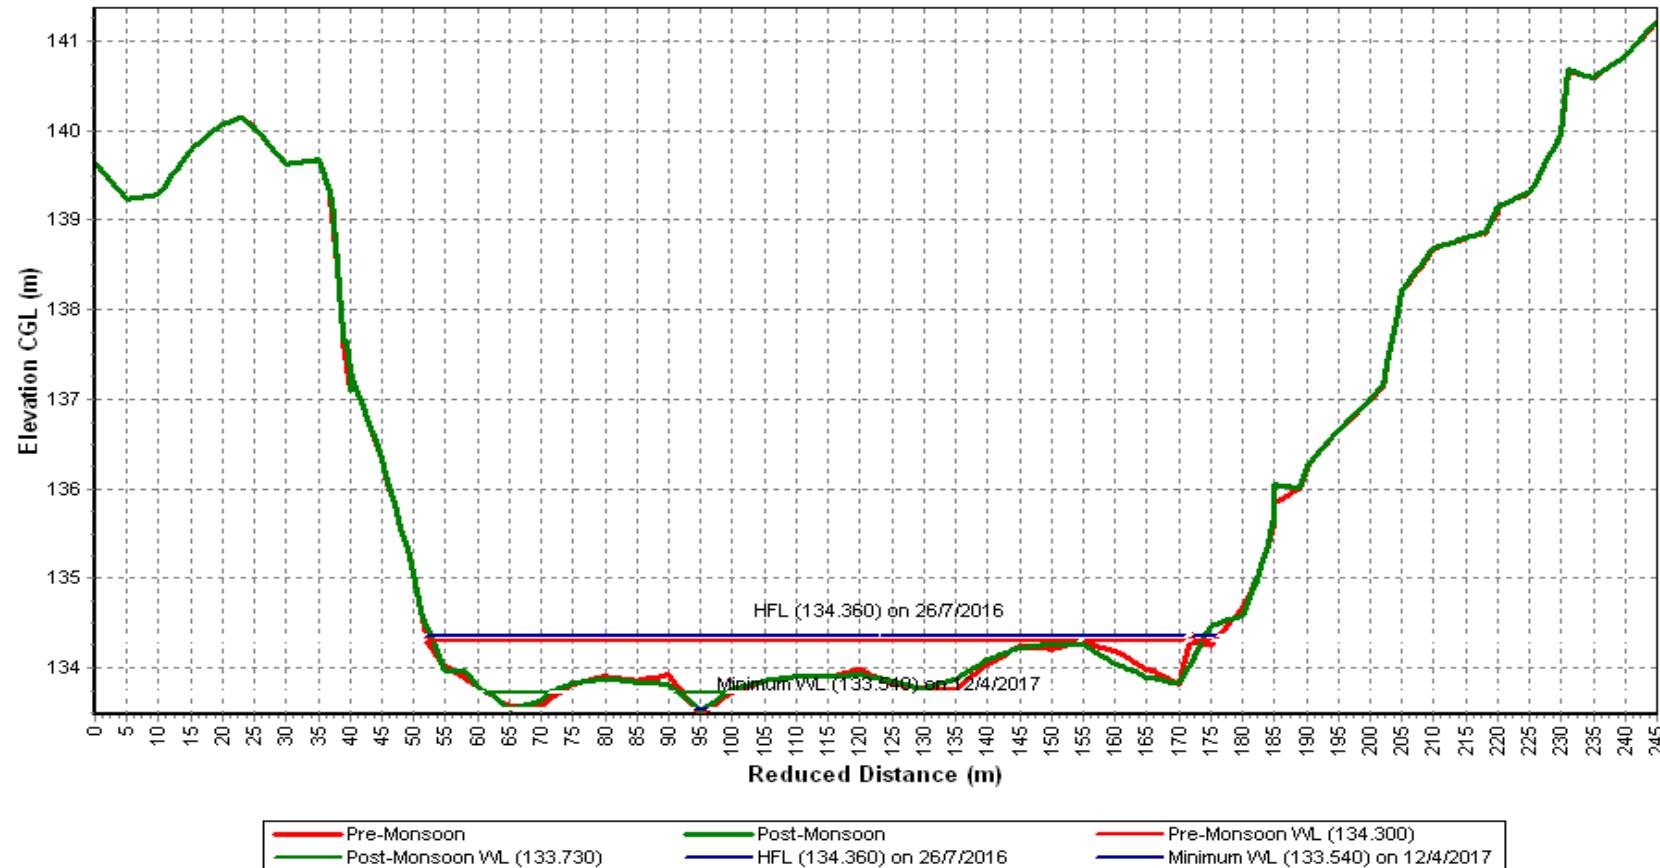

Station Name : VAZHAVACHANUR (CP000H2)

Local River : Ponnaiyar

Division : Hydrology Division, Chennai

Sub-Division : PPSD, Chennai

230

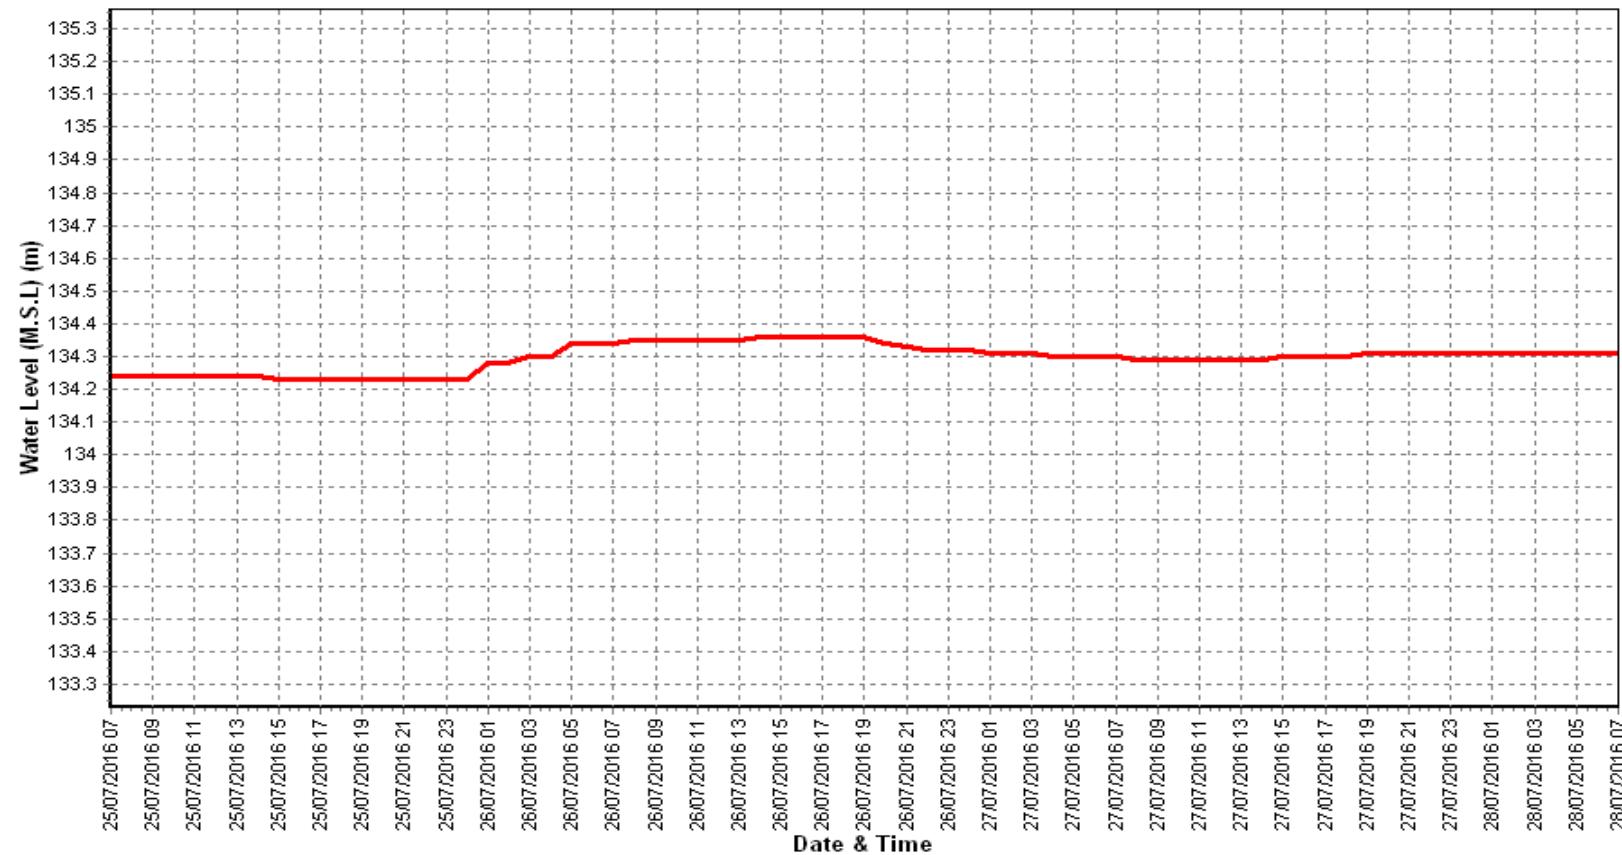

Water Level vs. Time - Graph of Highest Flood Peak during the Year : 2016-2017

Station Name : VAZHAVACHANUR (CP000H2)

Local River : Ponnaiyar

Division : Hydrology Division, Chennai

Sub-Division : PPSD, Chennai

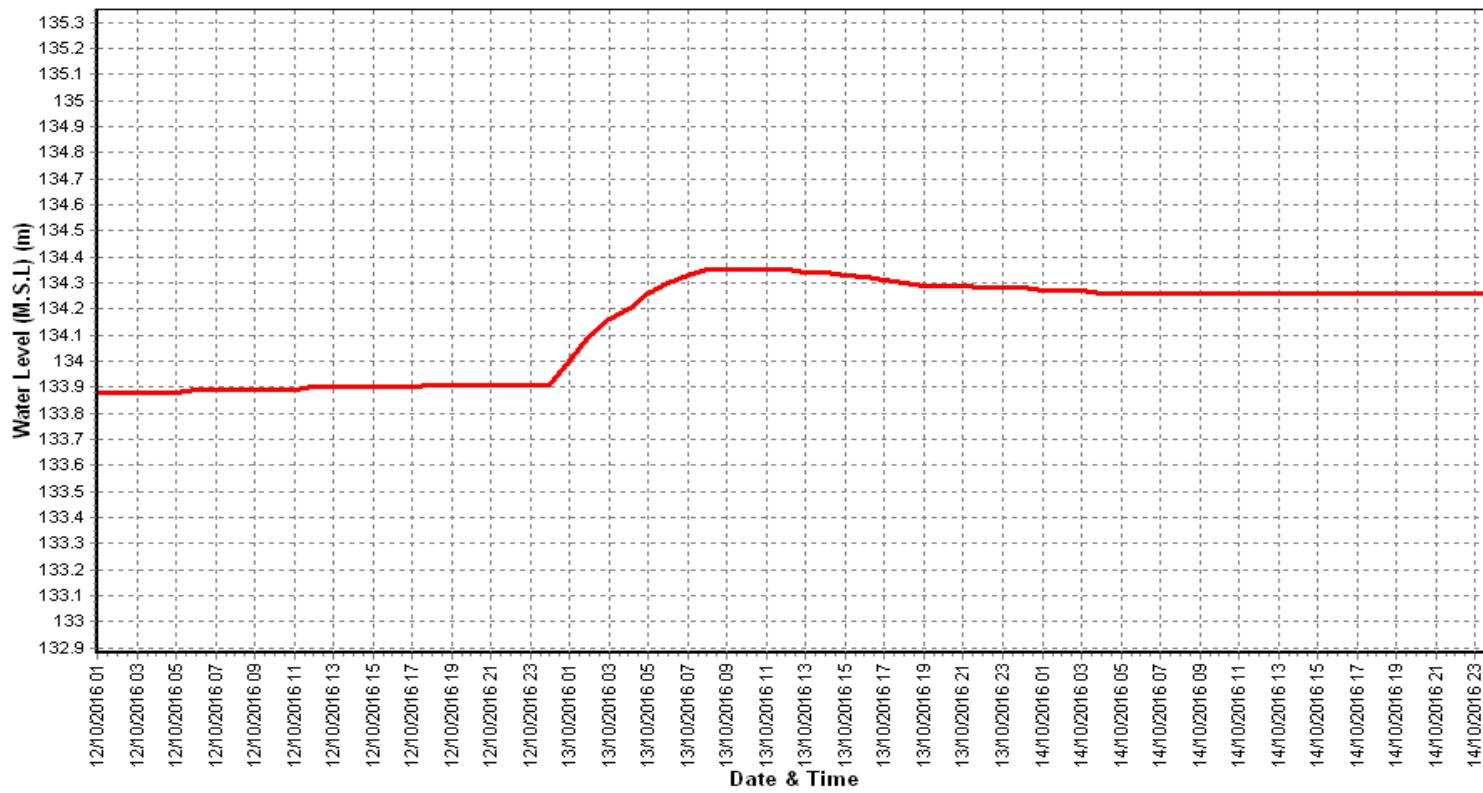

Time Span: 72 Hrs

Water Level vs. Time - Graph of 2nd Highest Flood Peak during the Year : 2016-2017

Station Name : VAZHAVACHANUR (CP000H2)
Local River : Ponnaiyar

Division : Hydrology Division, Chennai
Sub-Division : PSD, Chennai

Time Span: 72 Hrs

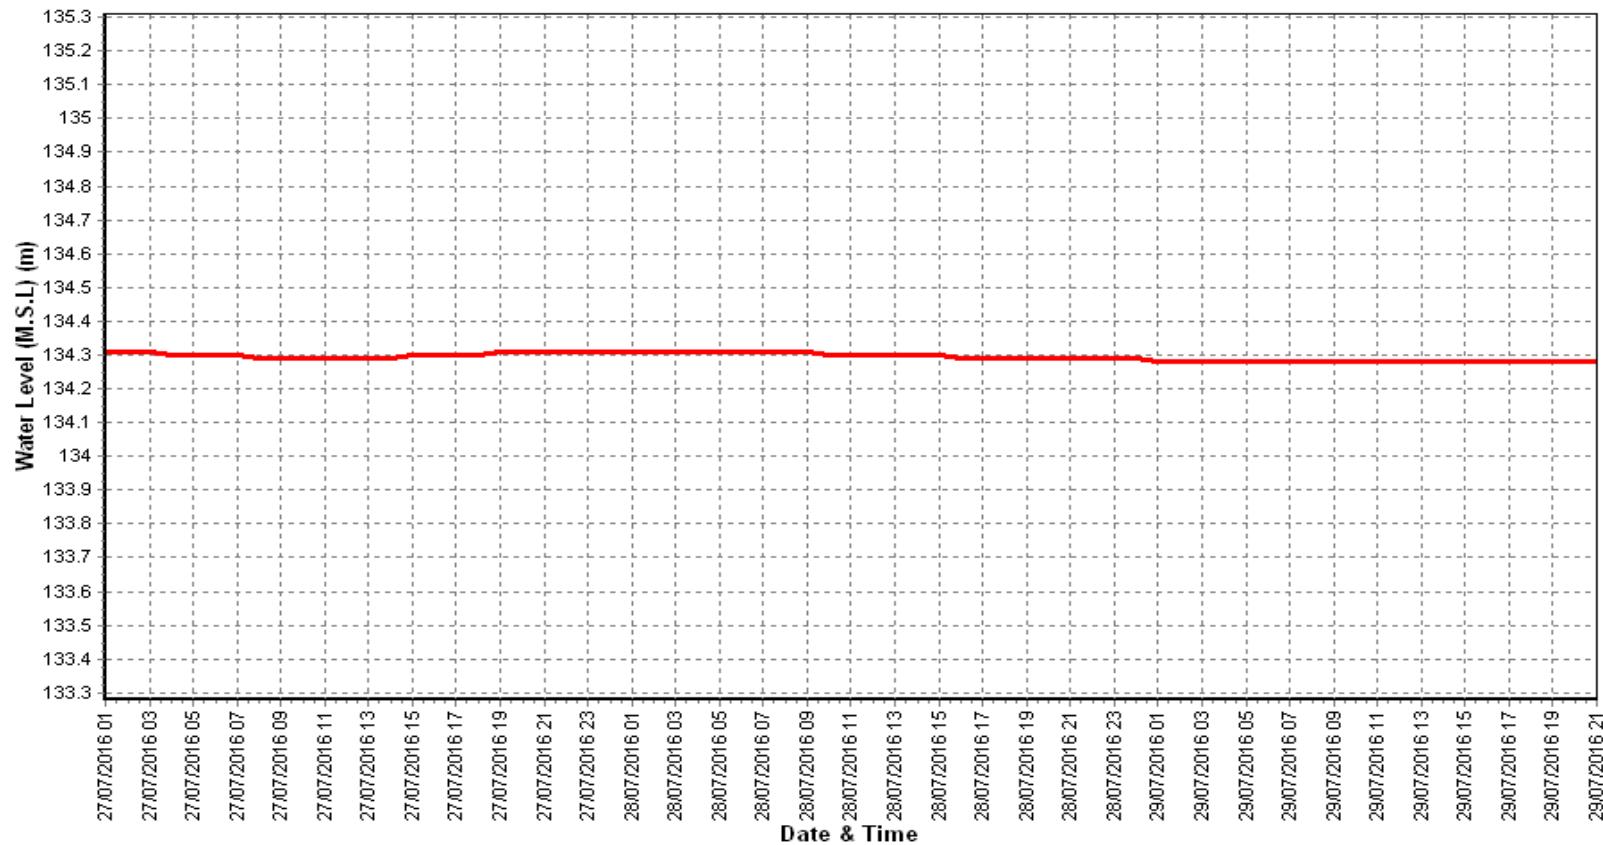

Water Level vs. Time - Graph of 3rd Highest Flood Peak during the Year : 2016-2017

Station Name : VAZHAVACHANUR (CP000H2)

Local River : Ponnaiyar

Division : Hydrology Division, Chennai

Sub-Division : PPSD, Chennai

Time Span: 72 Hrs

HISTOGRAM - HYDROGRAPH for Water Year : 2016-2017

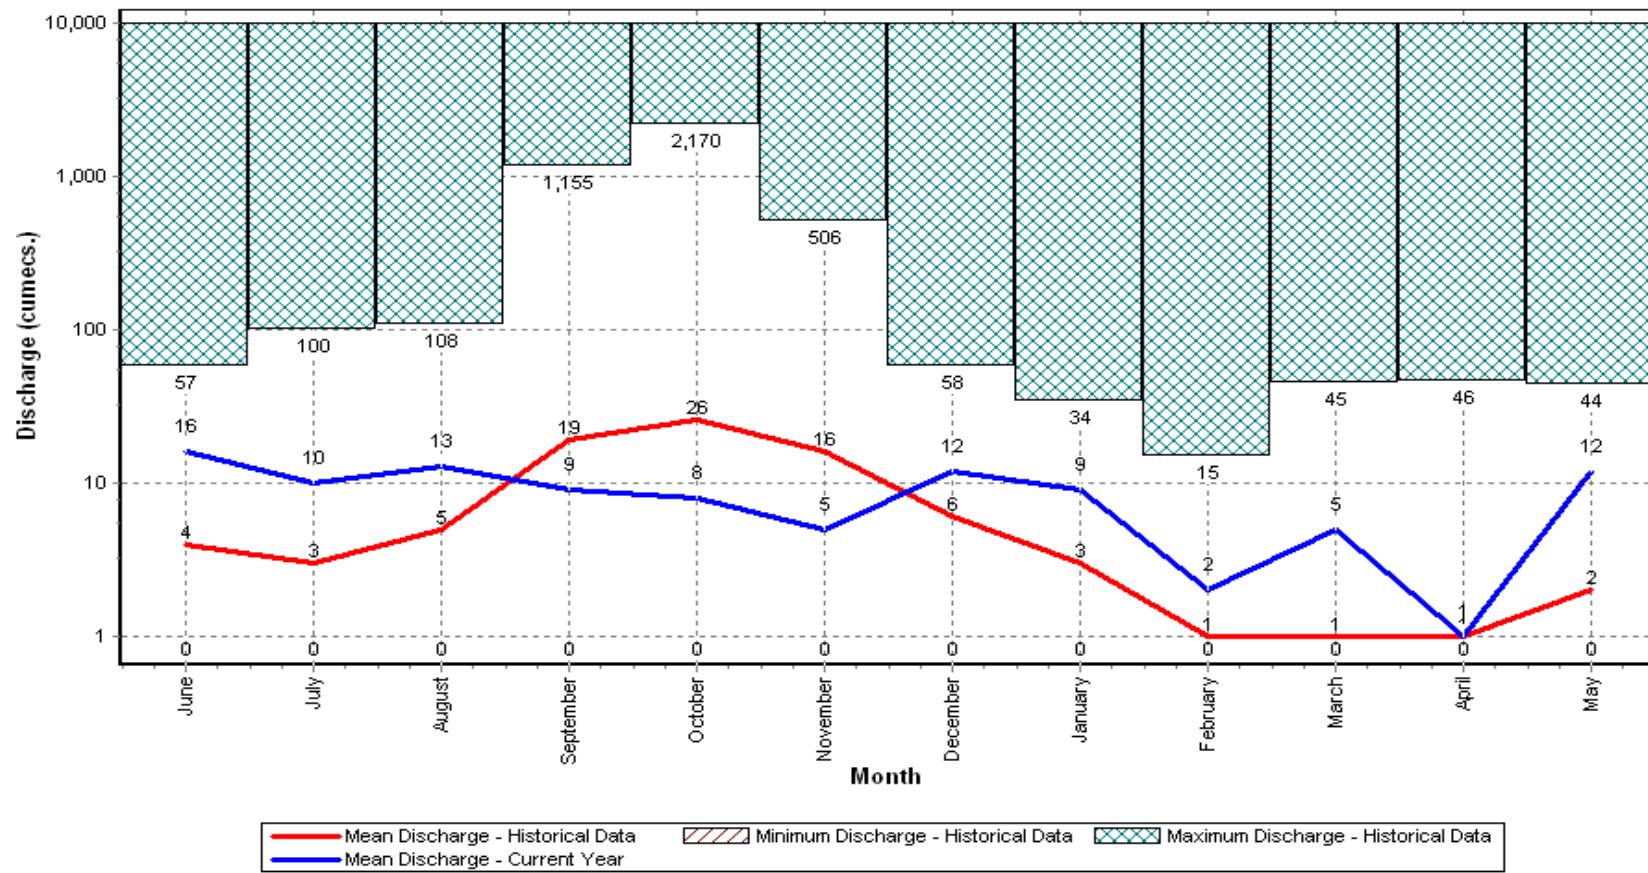

Station Name : Gummanur (CP000R5)

Local River : Ponnaiyar

Data considered : 1979-2017

Division : SR Division, Coimbatore

Sub-Division : LCSD, Trichi

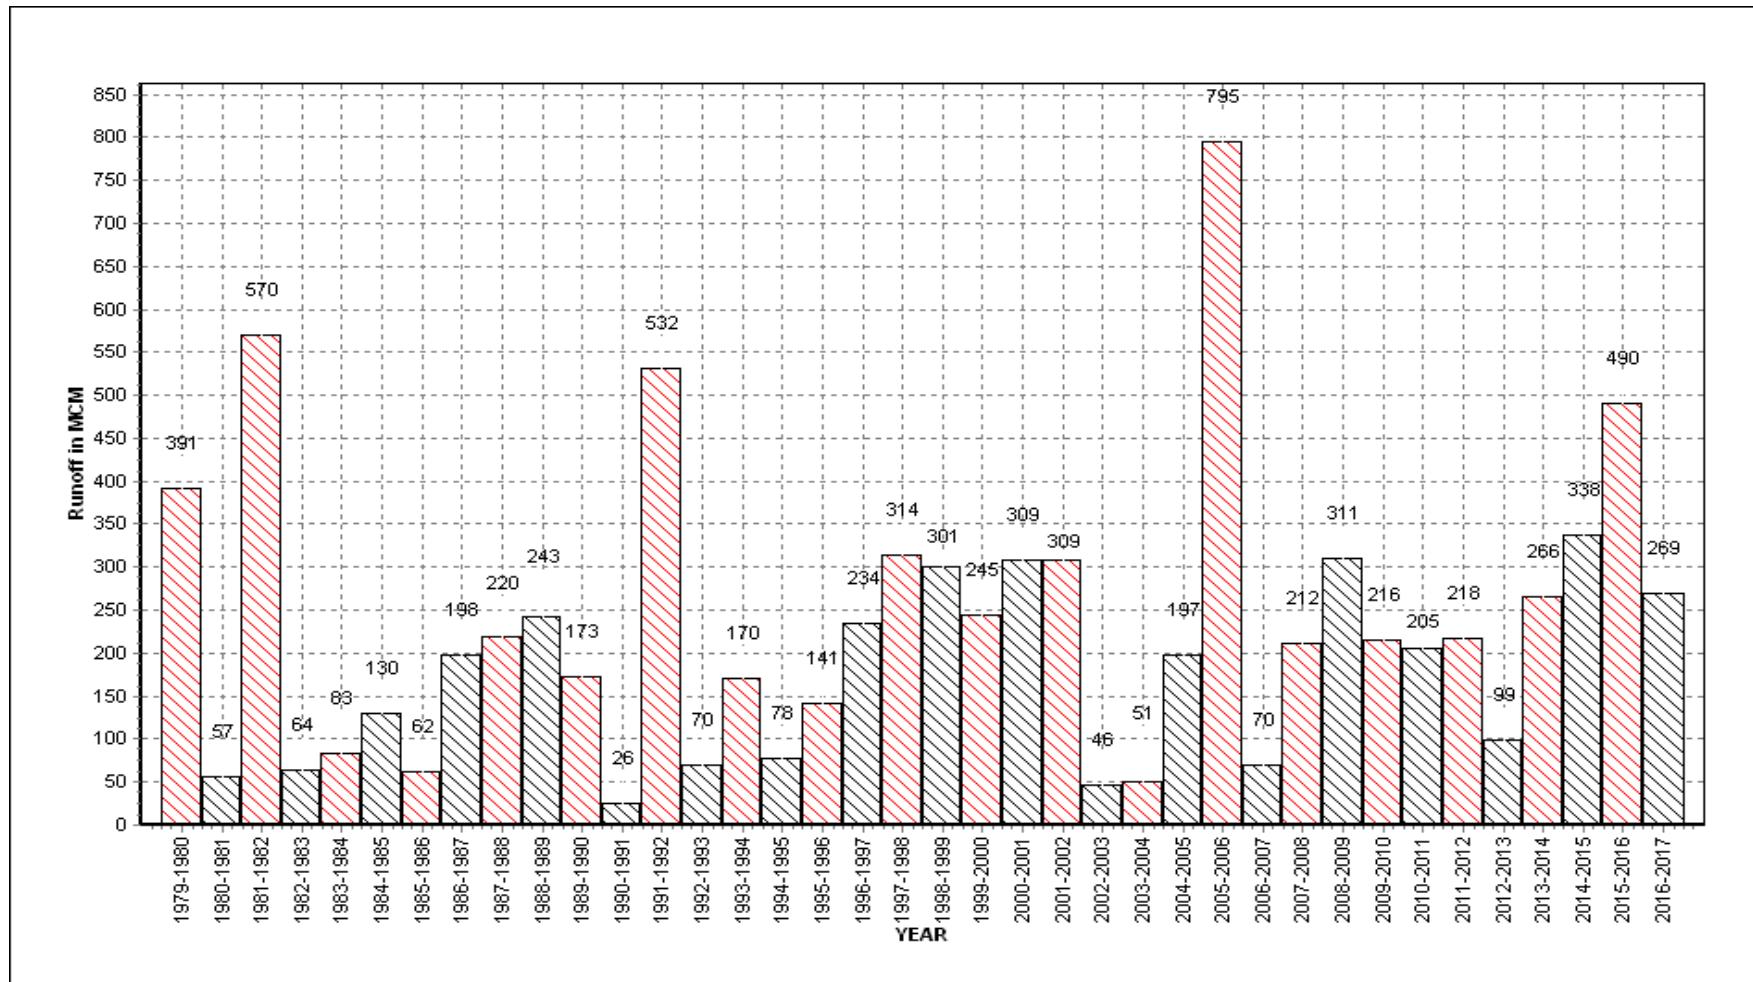

Annual Runoff Values for the period: 1979 - 2017

Station Name : Gummanur (CP000R5)

Local River : Ponnaiyar

Division : SR Division, Coimbatore

Sub-Division : LCSD, Trichi

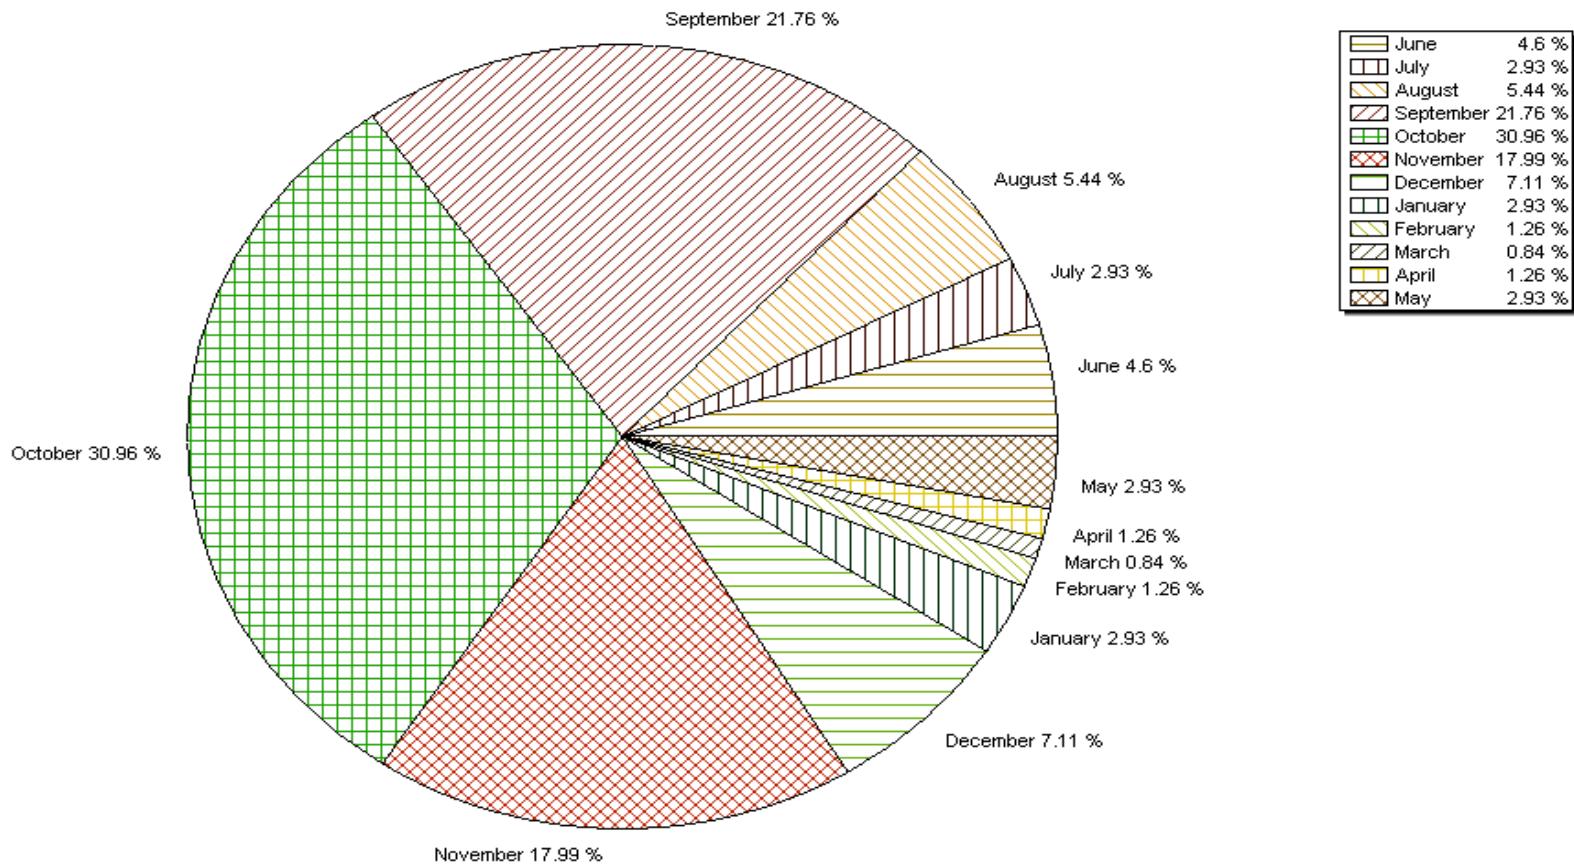

Monthly Average Runoff based on period : 1979-2016

Station Name : Gummanur (CP000R5)
Local River : Ponnaiyar

Division : SR Division, Coimbatore
Sub-Division : LCSD, Trichi

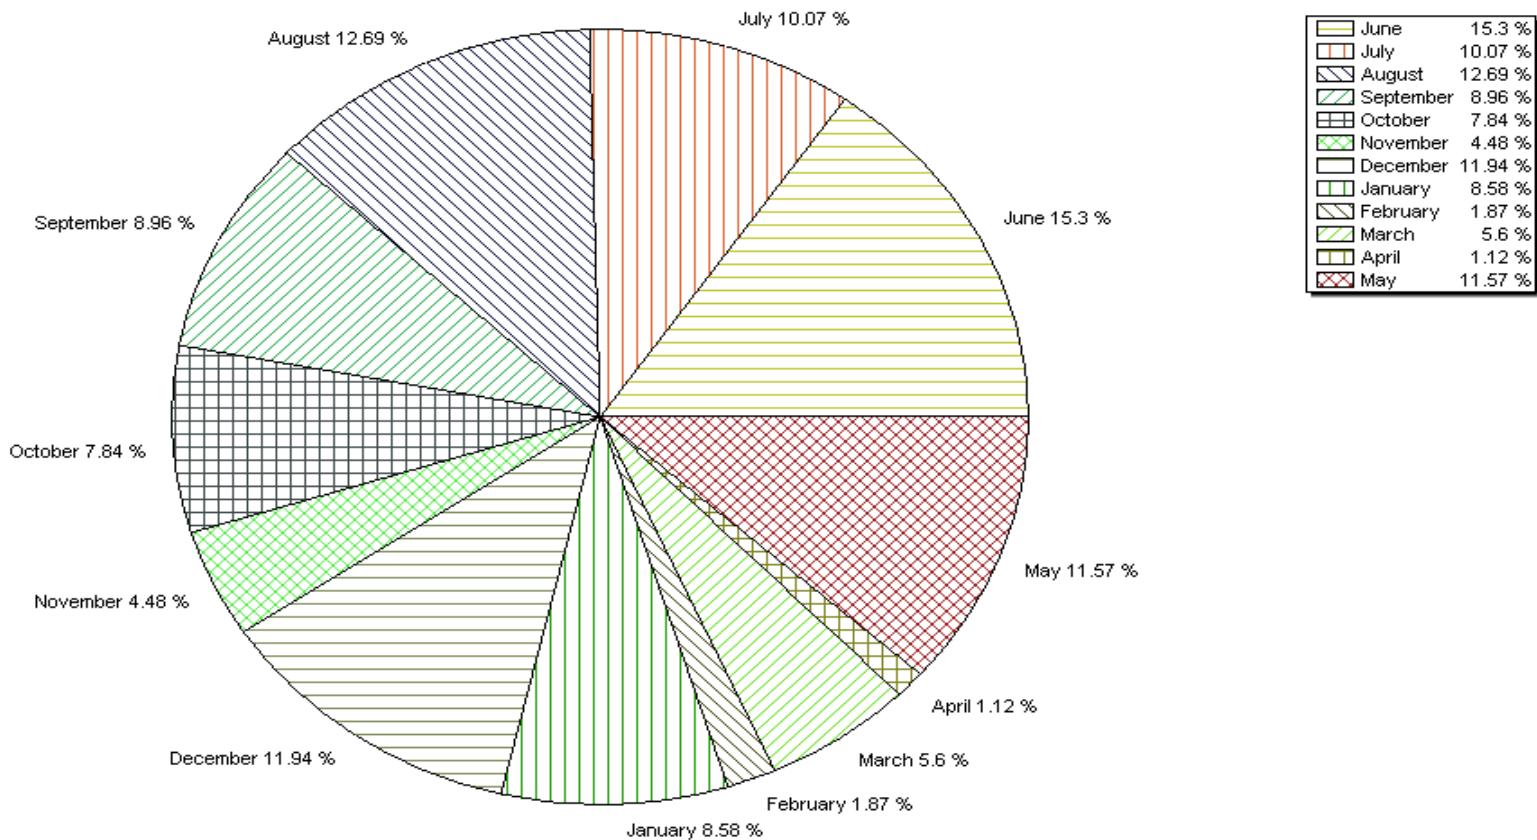

240

Station Name : Gummanur (CP000R5)
Local River : Ponnaiyar

Monthly Runoff for the Year : 2016-2017

Division : SR Division, Coimbatore
Sub-Division : LCSD, Trichi

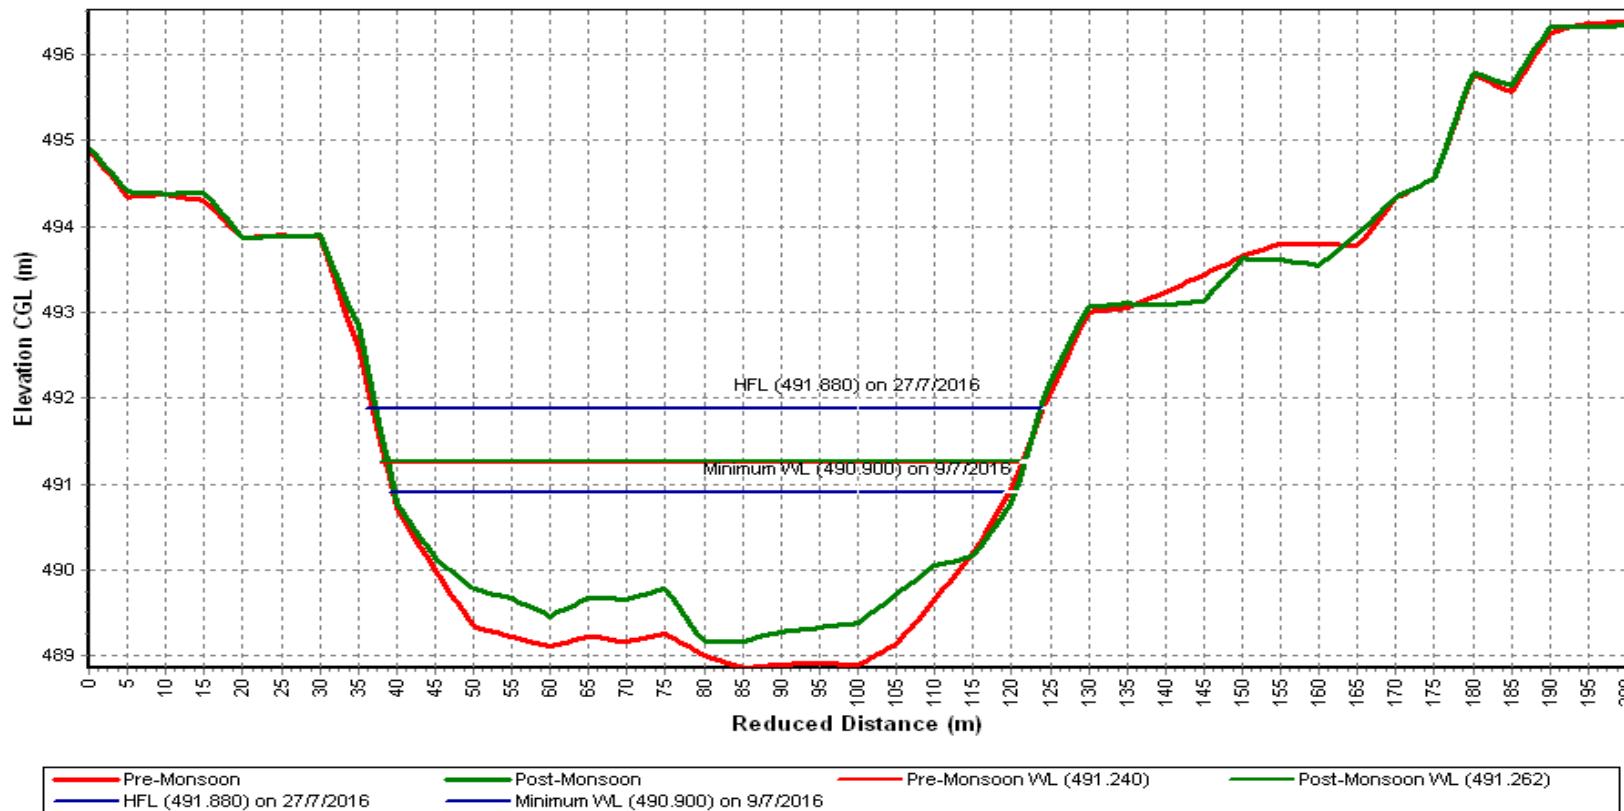

Pre-Monsoon & Post-Monsoon X-Section for Water Year : 2016-2017

Station Name : Gummanur (CP000R5)
Local River : Ponnaiyar

Division : SR Division, Coimbatore
Sub-Division : LCSD, Trichi

242

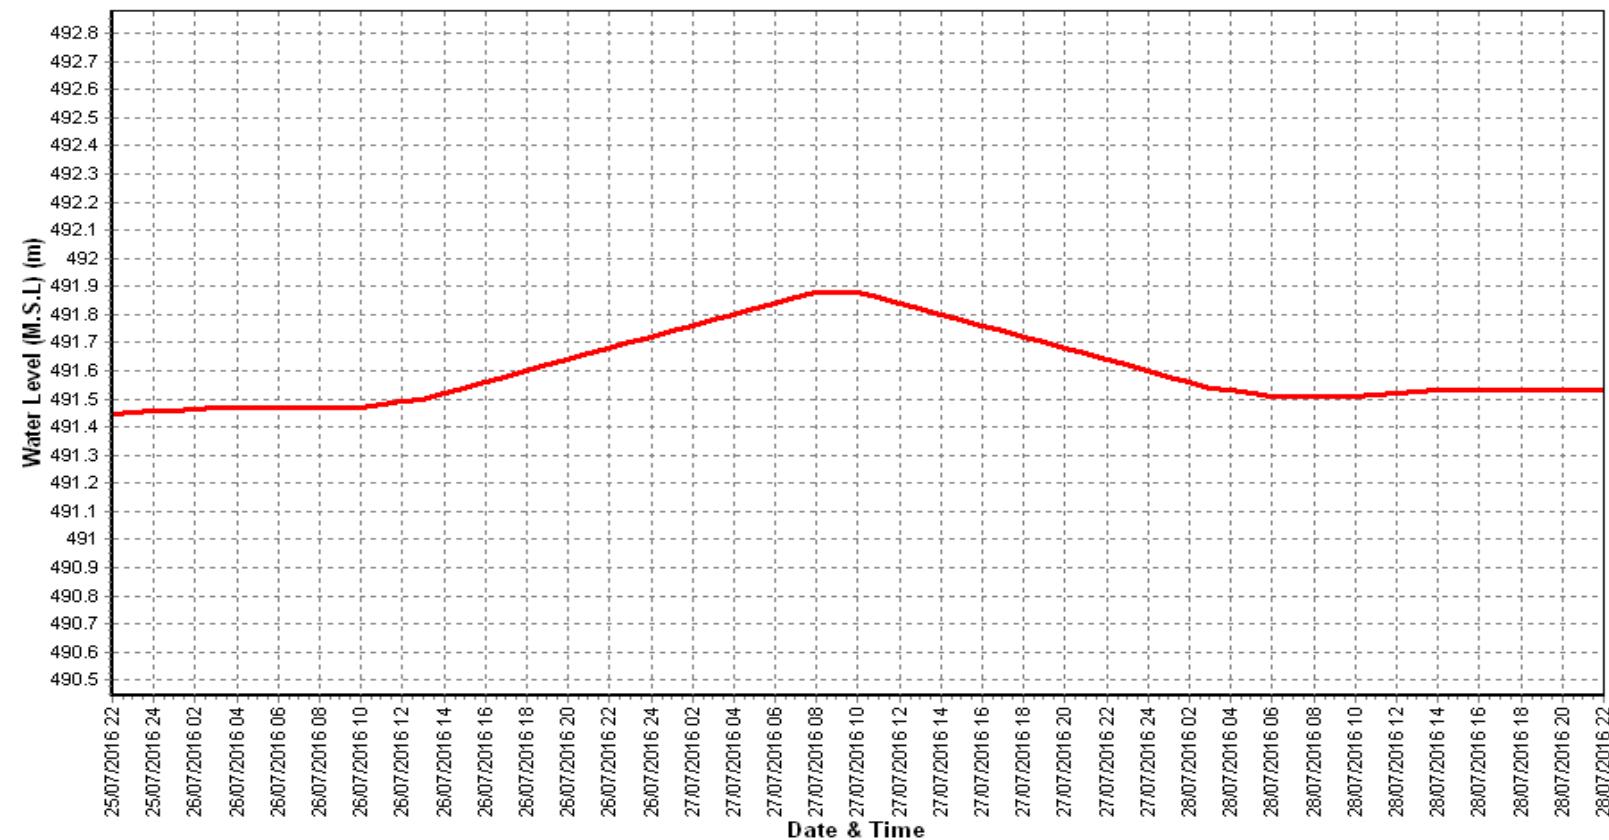

Water Level vs. Time - Graph of Highest Flood Peak during the Year : 2016-2017

Station Name : Gummanur (CP000R5)

Local River : Ponnaiyar

Division : SR Division, Coimbatore

Sub-Division : LCSD, Trichi

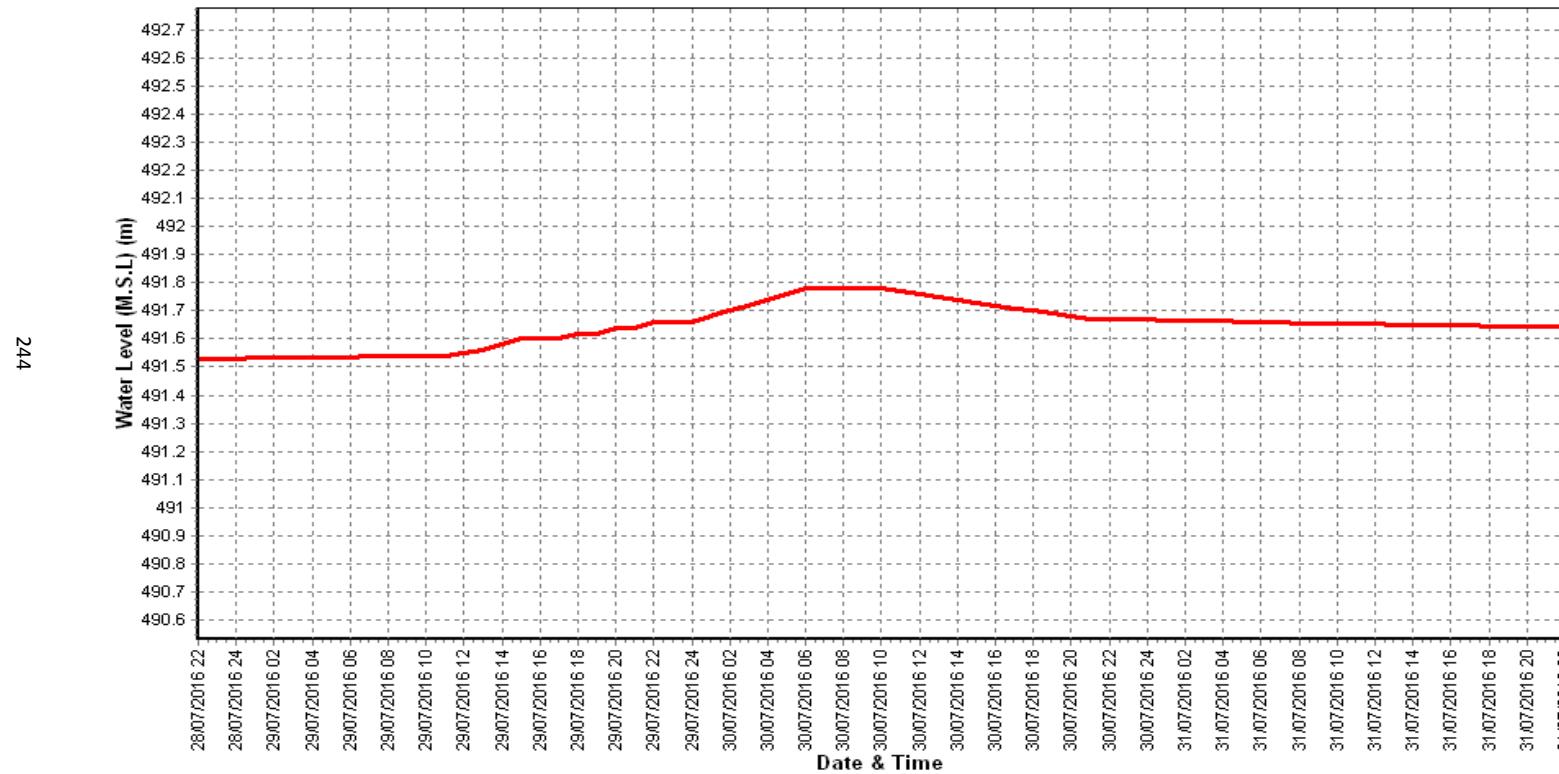

Time Span: 72 Hrs

Water Level vs. Time - Graph of 2nd Highest Flood Peak during the Year : 2016-2017

Station Name : Gummanur (CP000R5)
Local River : Ponnaiyar

Division : SR Division, Coimbatore
Sub-Division : LCSD, Trichi

Time Span: 72 Hrs

Water Level vs. Time - Graph of 3rd Highest Flood Peak during the Year : 2016-2017

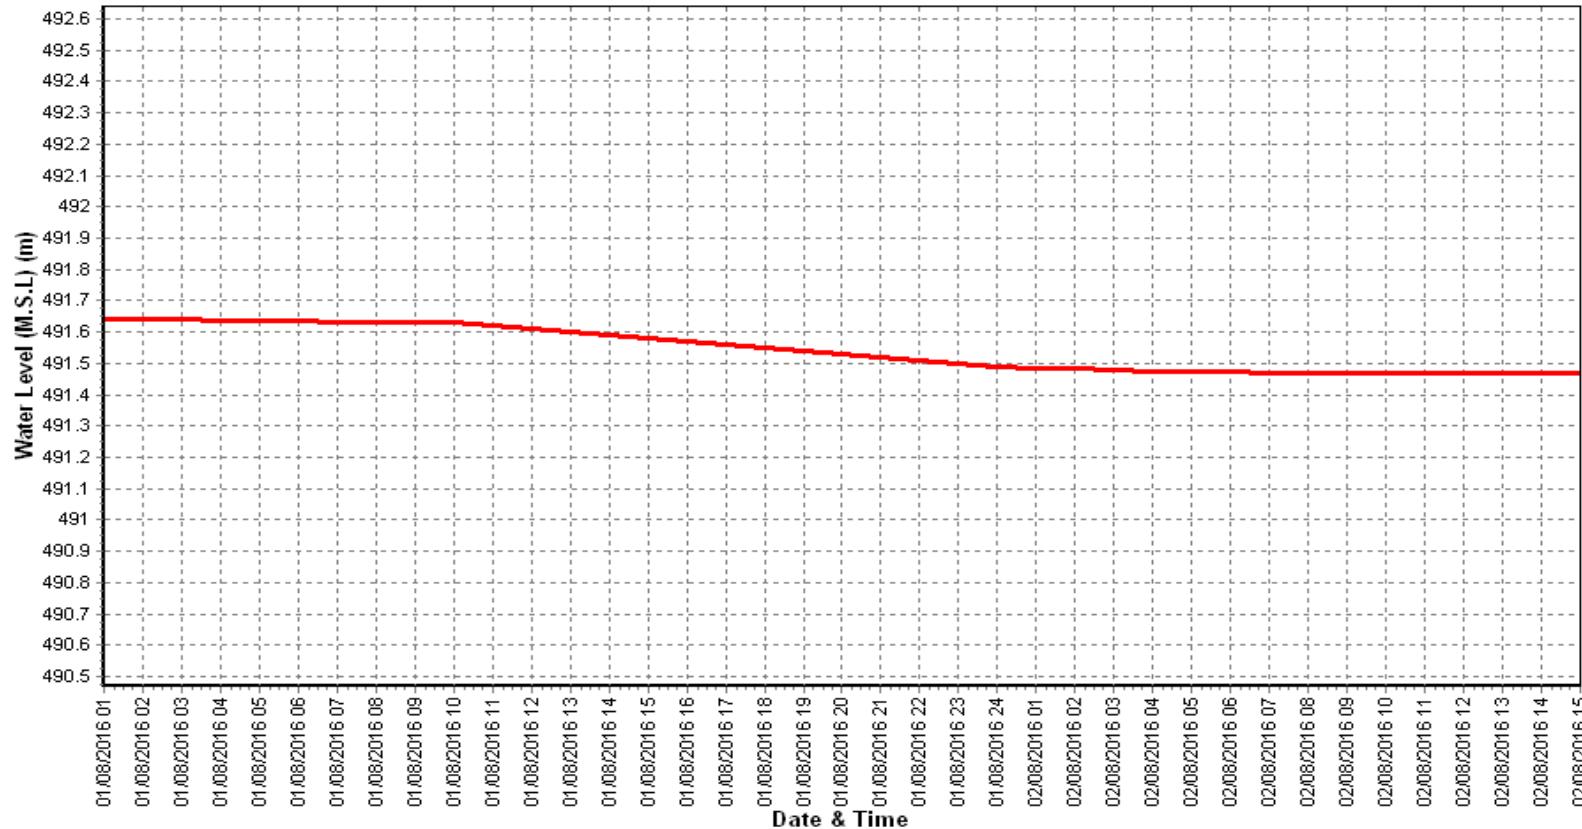

Station Name : Gummanur (CP000R5)

Local River : Ponnaiyar

Division : SR Division, Coimbatore

Sub-Division : LCSD, Trichi

Annual Sediment Load (Metric Tonnes) : 14838

Annual Sediment Load for the period: 2008-2017

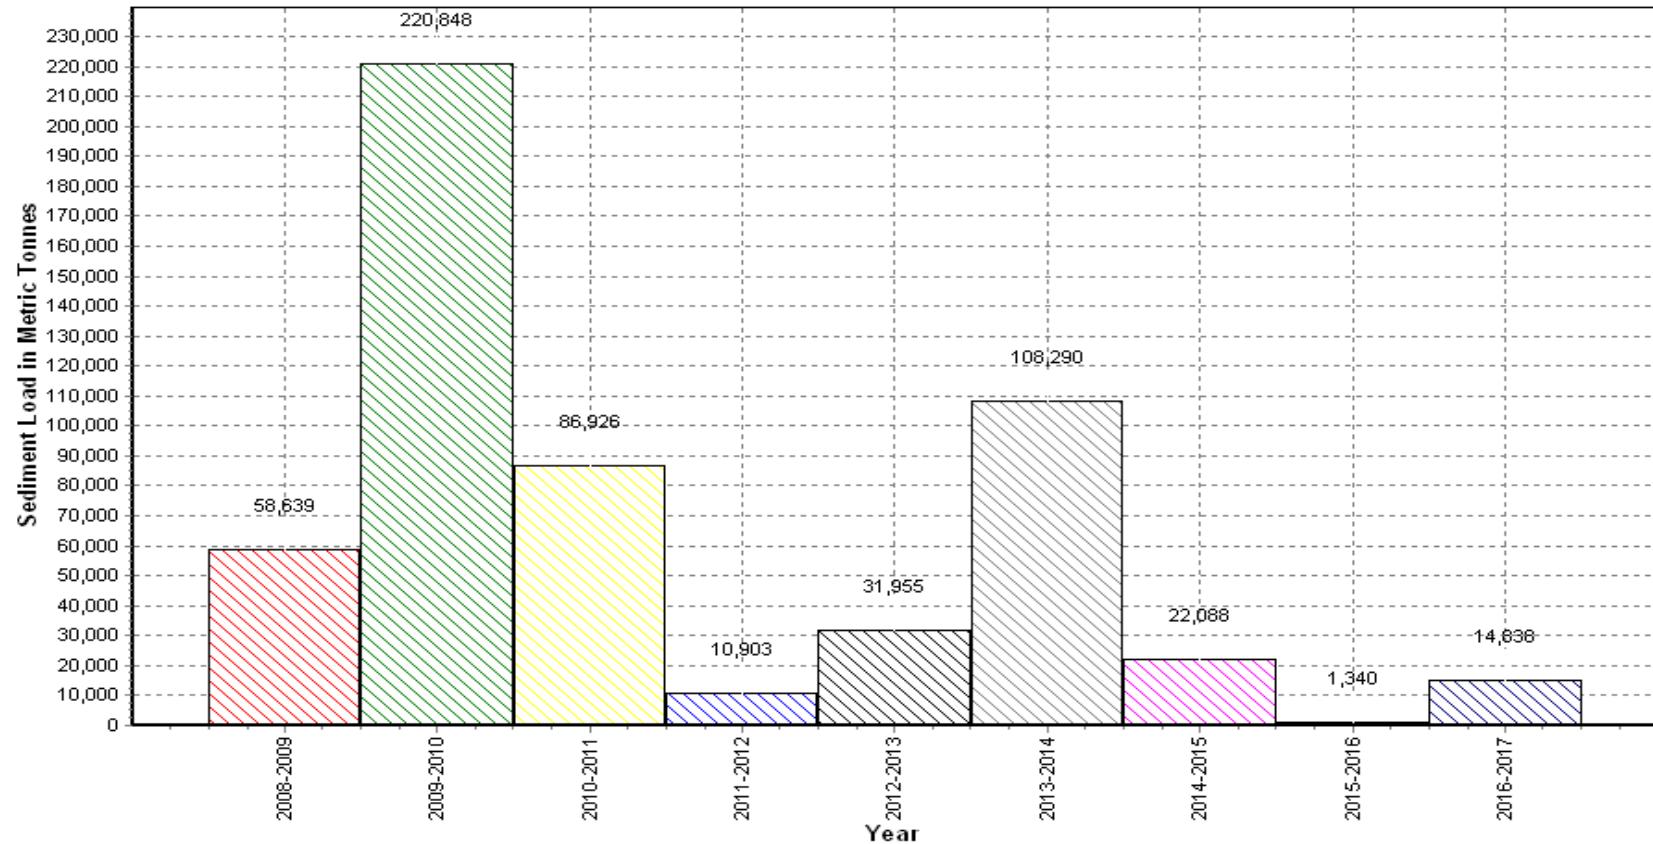

Station Name : MARELLA (AU000E5)

Local River : Gundlakamma

Division : Lower Krishna Divn., Hyderabad

Sub-Division : Lower Krishna SD 1, N.S.Dam

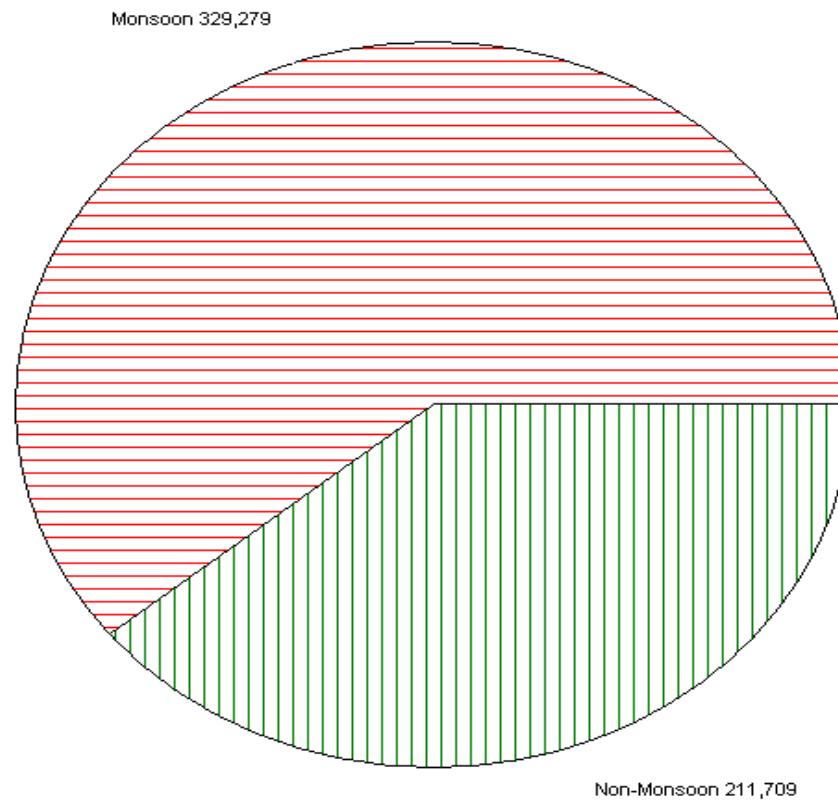

TYC

Seasonal Sediment Load for the period : 2008-2016

Station Name : MARELLA (AU000E5)
Local River : Gundlakamma

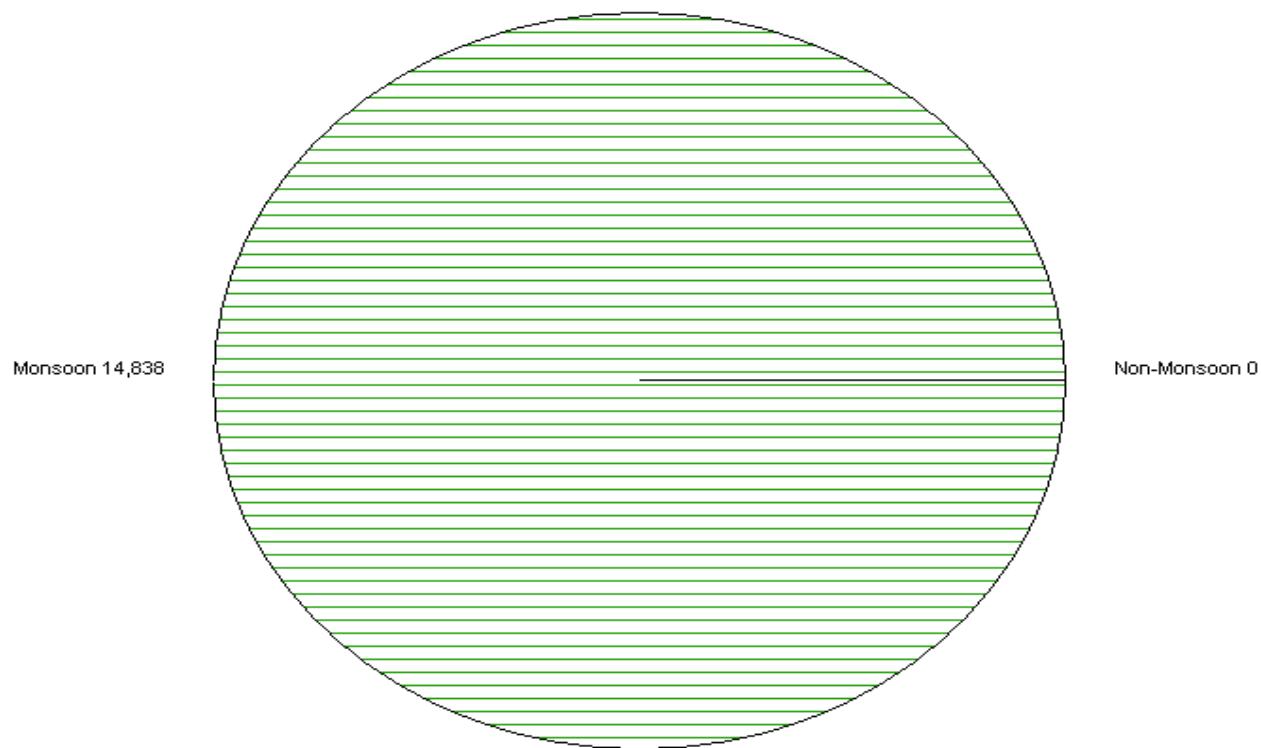

Division : Lower Krishna Divn., Hyderabad
Sub-Division : Lower Krishna SD 1, N.S.Dam

Station Name : MARELLA (AU000E5)
Local River : Gundlakamma

Seasonal Sediment Load for the Year: 2016-2017

Division : Lower Krishna Divn., Hyderabad
Sub-Division : Lower Krishna SD 1, N.S.Dam

BED MATERIAL ANALYSIS DATA

RIVER : Gundlakamma
SITE : Marella

CODE : AU000E5
CROSS SECTION : SGL

Annual Sediment Load (Metric Tonnes) : 714

Station Name : Nandipalli (APC00G7)
Local River : Sagileru

Annual Sediment Load for the period: 2013-2017

Division : Hydrology Division, Chennai
Sub-Division : PSD, Kadapa

65E

Seasonal Sediment Load for the period : 2013-2016

Station Name : Nandipalli (APC00G7)

Local River : Sagileru

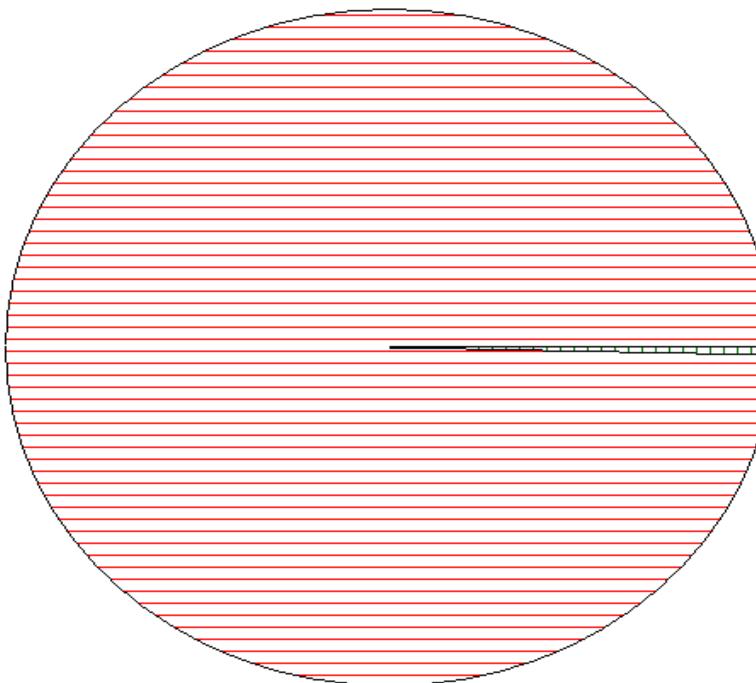

Division : Hydrology Division, Chennai

Sub-Division : PSD, Kadapa

360

Monsoon 66,561

Non-Monsoon 217

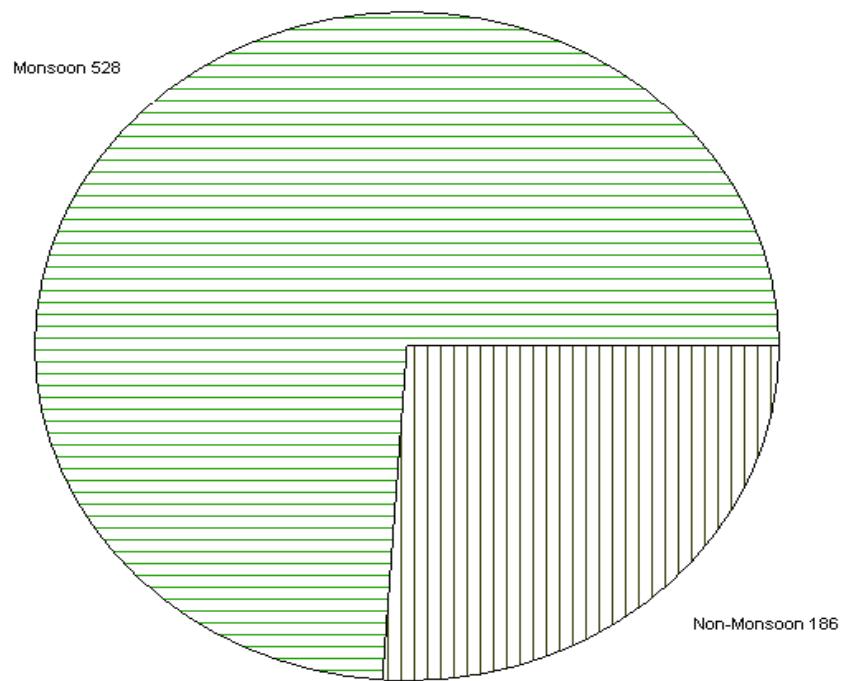

Seasonal Sediment Load for the Year: 2016-2017

Station Name : Nandipalli (APC00G7)
Local River : Sagileru

Division : Hydrology Division, Chennai
Sub-Division : PSD, Kadapa

361
