February 2018**

## P R E F A C E

Monitoring of river water quality in all the important river basins in India is carried out as a part of hydrological observation programme which is one of the main functions of the Central Water Commission. River Water Samples are collected from the regular hydrological stations maintained by the Commission and analysed in the laboratories set up at Divisional headquarters. The water quality data is published every year in the form of Water Quality Year Book.

In Krishna basin, the Water Quality is monitored at 32 hydrological observation stations (Upper Krishna Division-10, Lower Krishna Division-13, Cauvery Division-9). The water samples collected from the hydrological stations under Lower Krishna Division are being analysed at Water Quality Level-III Laboratory at Hyderabad. The water samples collected from the hydrological stations under Upper Krishna Division are being analysed at Water Quality Level-II Laboratory at Pune and of Cauvery Division are being analysed at Water Quality Laboratory Level II at Bengaluru.

The water samples received directly in the respective laboratories are analysed for parameters which include physical, chemical, biological & toxic elements. In addition to above parameters three chemical indices are derived mathematically based on the observed data. Then the waters are classified with the help of US Salinity Diagram.

The Water Quality Year Book 2016-17 is useful to all the water resources planners, managers and water users in Krishna basin. Its usefulness will further improve, particularly for planning drinking water supply, irrigation, and industrial and sewage disposal schemes.

(Rajeev Singhal)  
Superintending Engineer

Hyderabad

**KRISHNA BASIN  
WATER QUALITY DATA ( Vol.III )  
(JUNE 2016-MAY 2017)**

## **1.0 WATER QUALITY MONITORING**

River water quality monitoring is being carried out by the Central Water Commission in the Krishna basin since 1972. This volume III, contains data on water quality, monitored at 32 hydrological observation stations, in Krishna Basin during the water year 2016-17. Out of these 32 Water Quality stations, 10 stations are monitored by the Upper Krishna Division, Pune, 13 stations are monitored by Lower Krishna Division, Hyderabad and remaining 9 stations are monitored by the Cauvery Division, Bengaluru. Krishna Basin map showing the locations of these stations is appended.

One Level III laboratory located in Hyderabad and two Level II laboratories located in Pune and Bangalore are engaged in the analysis of water quality parameters.

### **1.1 Classification of Water Quality Stations**

Based on the human activity at water quality station, they are classified as base line stations, flux stations and trend stations. Collection of samples depends upon the classification of particular station.

**(i) Base line Stations:** These are the water quality stations, where there is no influence of human activities on water quality. At these stations, water quality is monitored six times a year for perennial rivers and three to four times a year for seasonal rivers.

**(ii) Flux Stations:** These stations are also known as impact stations. These stations are meant for measuring the mass of particular pollutant on main river stream for measuring the extent of pollution due to human interference or geological feature at any point of time and are necessary for measuring impact of pollution control measures adopted. These stations shall be monitored twelve to twenty-four times in a year, depending up on the pollution potential or importance of water use.

**(iii) Trend Stations:** These stations are designed for water quality monitoring to show how a particular point on a watercourse varies over time, normally, due to influence of human activities. These stations are monitored twelve times in a year.

## **2.0 OBSERVATION/SAMPLING TECHNIQUES**

A single grab sample at each station is collected on the scheduled dates at 30 cm below the water surface at the discharge measuring section from the stream.

The water samples are collected in two polythene bottles of one liter capacity and in one 250ml sterilized glass bottle every month on the sample collection date. The water samples collected in polythene bottles are used for the analysis of physico chemical parameters and the water sample collected in the sterilized glass bottle is used for the analysis of Bacteriological parameters. Once in year in the month of April water sample are collected for the analysis of Trace and Toxic elements in a new

polythene bottles and also water samples are collected in amber colored glass bottles for the analysis of Pesticides

The samples are transported in cool packs with ice to the respective laboratories with a minimum loss of time to ensure that they reach the laboratories within 24 hours after collection. The parameters like pH, electrical conductance, dissolved oxygen, alkalinity, hardness and ammonia are analyzed immediately soon after the receipt of samples in laboratory. Afterwards they are preserved at 4°C for analysis of other parameters within the prescribed time limits.

## **2.1 Details of Samples:**

Total number of samples collected and number of parameters analysed during the water year 2016-17 in the Krishna Basin are given below

Divisional Laboratory	No.of Sites	No of samples		No.of parameters analysed
		Collected	Analysed	
Upper Krishna Division(Level- II)	10	27	27	594
Lower Krishna Division (Level- III)	13	104	104	3128
Cauvery Division(Level- II)	9	50	50	1000
<b>Total</b>	<b>32</b>			

### **2.1.1 Type of Water Quality Stations:**

Sl. No	Name of Site	Name of Division	Type	Sl. No	Name of Site	Name of Division	Type

16	Kuppelur	CD	Trend	32	Koyna at Warunji	UKD	Baseline

## **2.2 Analysis Techniques and Methods**

The water samples, received from different water quality monitoring stations are analyzed for different parameters following the "Standard methods for the examination of water and waste water" – APHA, AWWA & WPCF, 22<sup>nd</sup> edition.

### **2.3 Volumetric analysis Method**

This method is used to determine the quantities of total hardness, calcium, carbonate, bicarbonate, chloride, dissolved oxygen, biochemical oxygen demand and chemical oxygen demand. In this procedure, analysis is carried out to find the volume of a solution of accurately known concentration, which reacts quantitatively with the known volume of sample from which the concentration of the parameter is evaluated.

### **2.4. Instrumental methods:**

The instrumental methods, the relevant parameters analyzed and instruments used are given here under.

S.No.	Method	Parameter analyzed	Instrument used
1	Potentiometric method	pH	Digital pH meter
2	Conductometric method	Electrical Conductance	Digital Conductivity meter
3	Nephelometric method	Sulfate & Turbidity	Nephelo-Turbidity Meter
4	Flame Emission Photometric method	Sodium & Potassium	Flame Photometer
5	Colorimetric method	Ammonical Nitrogen, Nitrite-Nitrogen, Phosphate-Phosphorous, Silicon, Boron	UV-VIS Spectrophotometer
6	Gravimetric method	Total dissolved solids	Hot Air oven for total dryness at 180°C
7	Chromatographic method	Aldrin, BHC, DDT, Dieldrin and Endosulphan	Gas Chromatograph
8	Atomic Absorption method	Arsenic, Cadmium, Chromium, Mercury, Iron Nickel, Lead, Zinc and copper	Atomic Absorption Spectrometer
9	Oxidative Combustion Infrared Analysis method	Total Organic Carbon	Total Organic Carbon Analyzer
10	Ion selective electrode method/Spectro photometric method	Nitrate-Nitrogen & Fluoride	Ion meter/Spectrophotometer

### **2.5 List of Water Quality Parameters analyzed in the CWC Laboratories**

**Physico – Chemical Parameters:** 1. pH 2. Electrical Conductance 3. Sodium 4. Potassium 5. Calcium 6. Magnesium 7. Iron 8. Ammonia 9. Carbonate 10. Bi-carbonate 11. Chloride 12. Fluoride 13. Sulphate 14. Nitrate 15. Nitrite 16. Ortho-Phosphate, 17. Silicate, 18. Total Hardness and 19. Turbidity. 20. Boron, 21. Total Dissolved Solids.

**Biological / Bacteriological Parameters:** 1. Dissolved Oxygen 2. Bio-chemical Oxygen Demand 3. Chemical Oxygen Demand. 4.Total Organic Carbon .5.Total Coliforms 6.Fecal Coliforms

**Pesticides :** 1.Aldrin 2.BHC 3.DDT 4.Dieldrin 5.Endo sulfan.

**Trace & Toxic Elements :** 1..Arsenic 2.Mercury 3.Nickel 4.Zinc 5. Chromium 6.Lead 7.Cadmium 8.Copper.

## 2.6 Calculated parameters

Six parameters are calculated on the measured results of other parameters. The formulae are given below.

(i) **Carbonate and bicarbonate:** By using the measured values of Phenolphthalein Alkalinity (P) and Total Alkalinity (T), Carbonate alkalinity and bicarbonate alkalinity are calculated in water sample using following formulae.

Condition	OH <sup>-</sup> alkalinity as CaCO <sub>3</sub> mg/L	CO <sub>3</sub> <sup>2-</sup> alkalinity as CaCO <sub>3</sub> mg/L	HCO <sub>3</sub> <sup>2-</sup> alkalinity as CaCO <sub>3</sub> mg/L
P=0	0	0	T
P<½T	0	2P	T-2P
P=½T	0	2P	0
P>½T	2P-T	2(T-P)	0
P=½T	T	0	0

$$\text{CO}_3^{2-} \text{ mg/L} = \text{CO}_3^{2-} \text{ alkalinity as CaCO}_3 \text{ mg/L} \times 0.60$$

$$\text{HCO}_3^{2-} \text{ mg/L} = \text{HCO}_3^{2-} \text{ alkalinity as CaCO}_3 \text{ mg/L} \times 1.22$$

(ii) **Calcium:** Ca<sup>++</sup> mg/L = 0.4 x Ca-Hardness as CaCO<sub>3</sub><sup>2-</sup> mg/L

(iii) **Magnesium:** Mg<sup>++</sup> mg/L = 0.243 x [Total Hardness as CaCO<sub>3</sub><sup>2-</sup> mg/L - Ca-Hardness as CaCO<sub>3</sub><sup>2-</sup> mg/L]

(iv) **Sodium Percentage (%Na)** : SP =  $\frac{\text{Na}^+ \times 100}{\sqrt{[\text{Ca}^{++} + \text{Mg}^{++} + \text{Na}^+ + \text{K}^+]}}$

(Ionic concentrations are in meq /L)

(v) **Sodium Adsorption Ratio (SAR)** : SAR =  $\frac{\text{Na}^+}{\sqrt{(\text{Ca}^{++} + \text{Mg}^{++})/2}}$

(Ionic concentrations are in meq /L)

(vi) **Residual Sodium Carbonate (RSC)** : RSC = (CO<sub>3</sub><sup>2-</sup> + HCO<sub>3</sub><sup>2-</sup>) - (Ca<sup>++</sup> + Mg<sup>++</sup>)  
(Ionic concentrations are in meq /L)

## **2.7 Method of Presentation**

Station wise water quality data as presented in this volume comprises history sheet, water quality data sheet and water quality summary for the current year and water quality seasonal average summary from 1993. The data presented in this volume-III are generated through SWDES. The serial order of water quality sites is arranged along the river moving upstream from the sea or confluence with another river / international boundary, towards its source, giving priority to sites on intermediate tributary. Tolerance limits of water quality parameters for different designated uses are according to Bureau of Indian Standard code BIS : 2296-1982.

**Table 1 - Tolerance limit relating to selected pollution parameters for inland surface waters required for different uses as prescribed by the Bureau of Indian Standards (BIS: 2296-1982)**

Sl. No	Constituents	Unit	Designated use class of inland surface water				
			A	B	C	D	E
1	pH		6.5-8.5	6.5-8.5	6.5-8.5	6.5-8.5	6.0-8.5

**A Drinking water source without conventional treatment but after disinfections**

**B Outdoor bathing-organised**

**C Drinking water source with conventional treatment followed by disinfections**

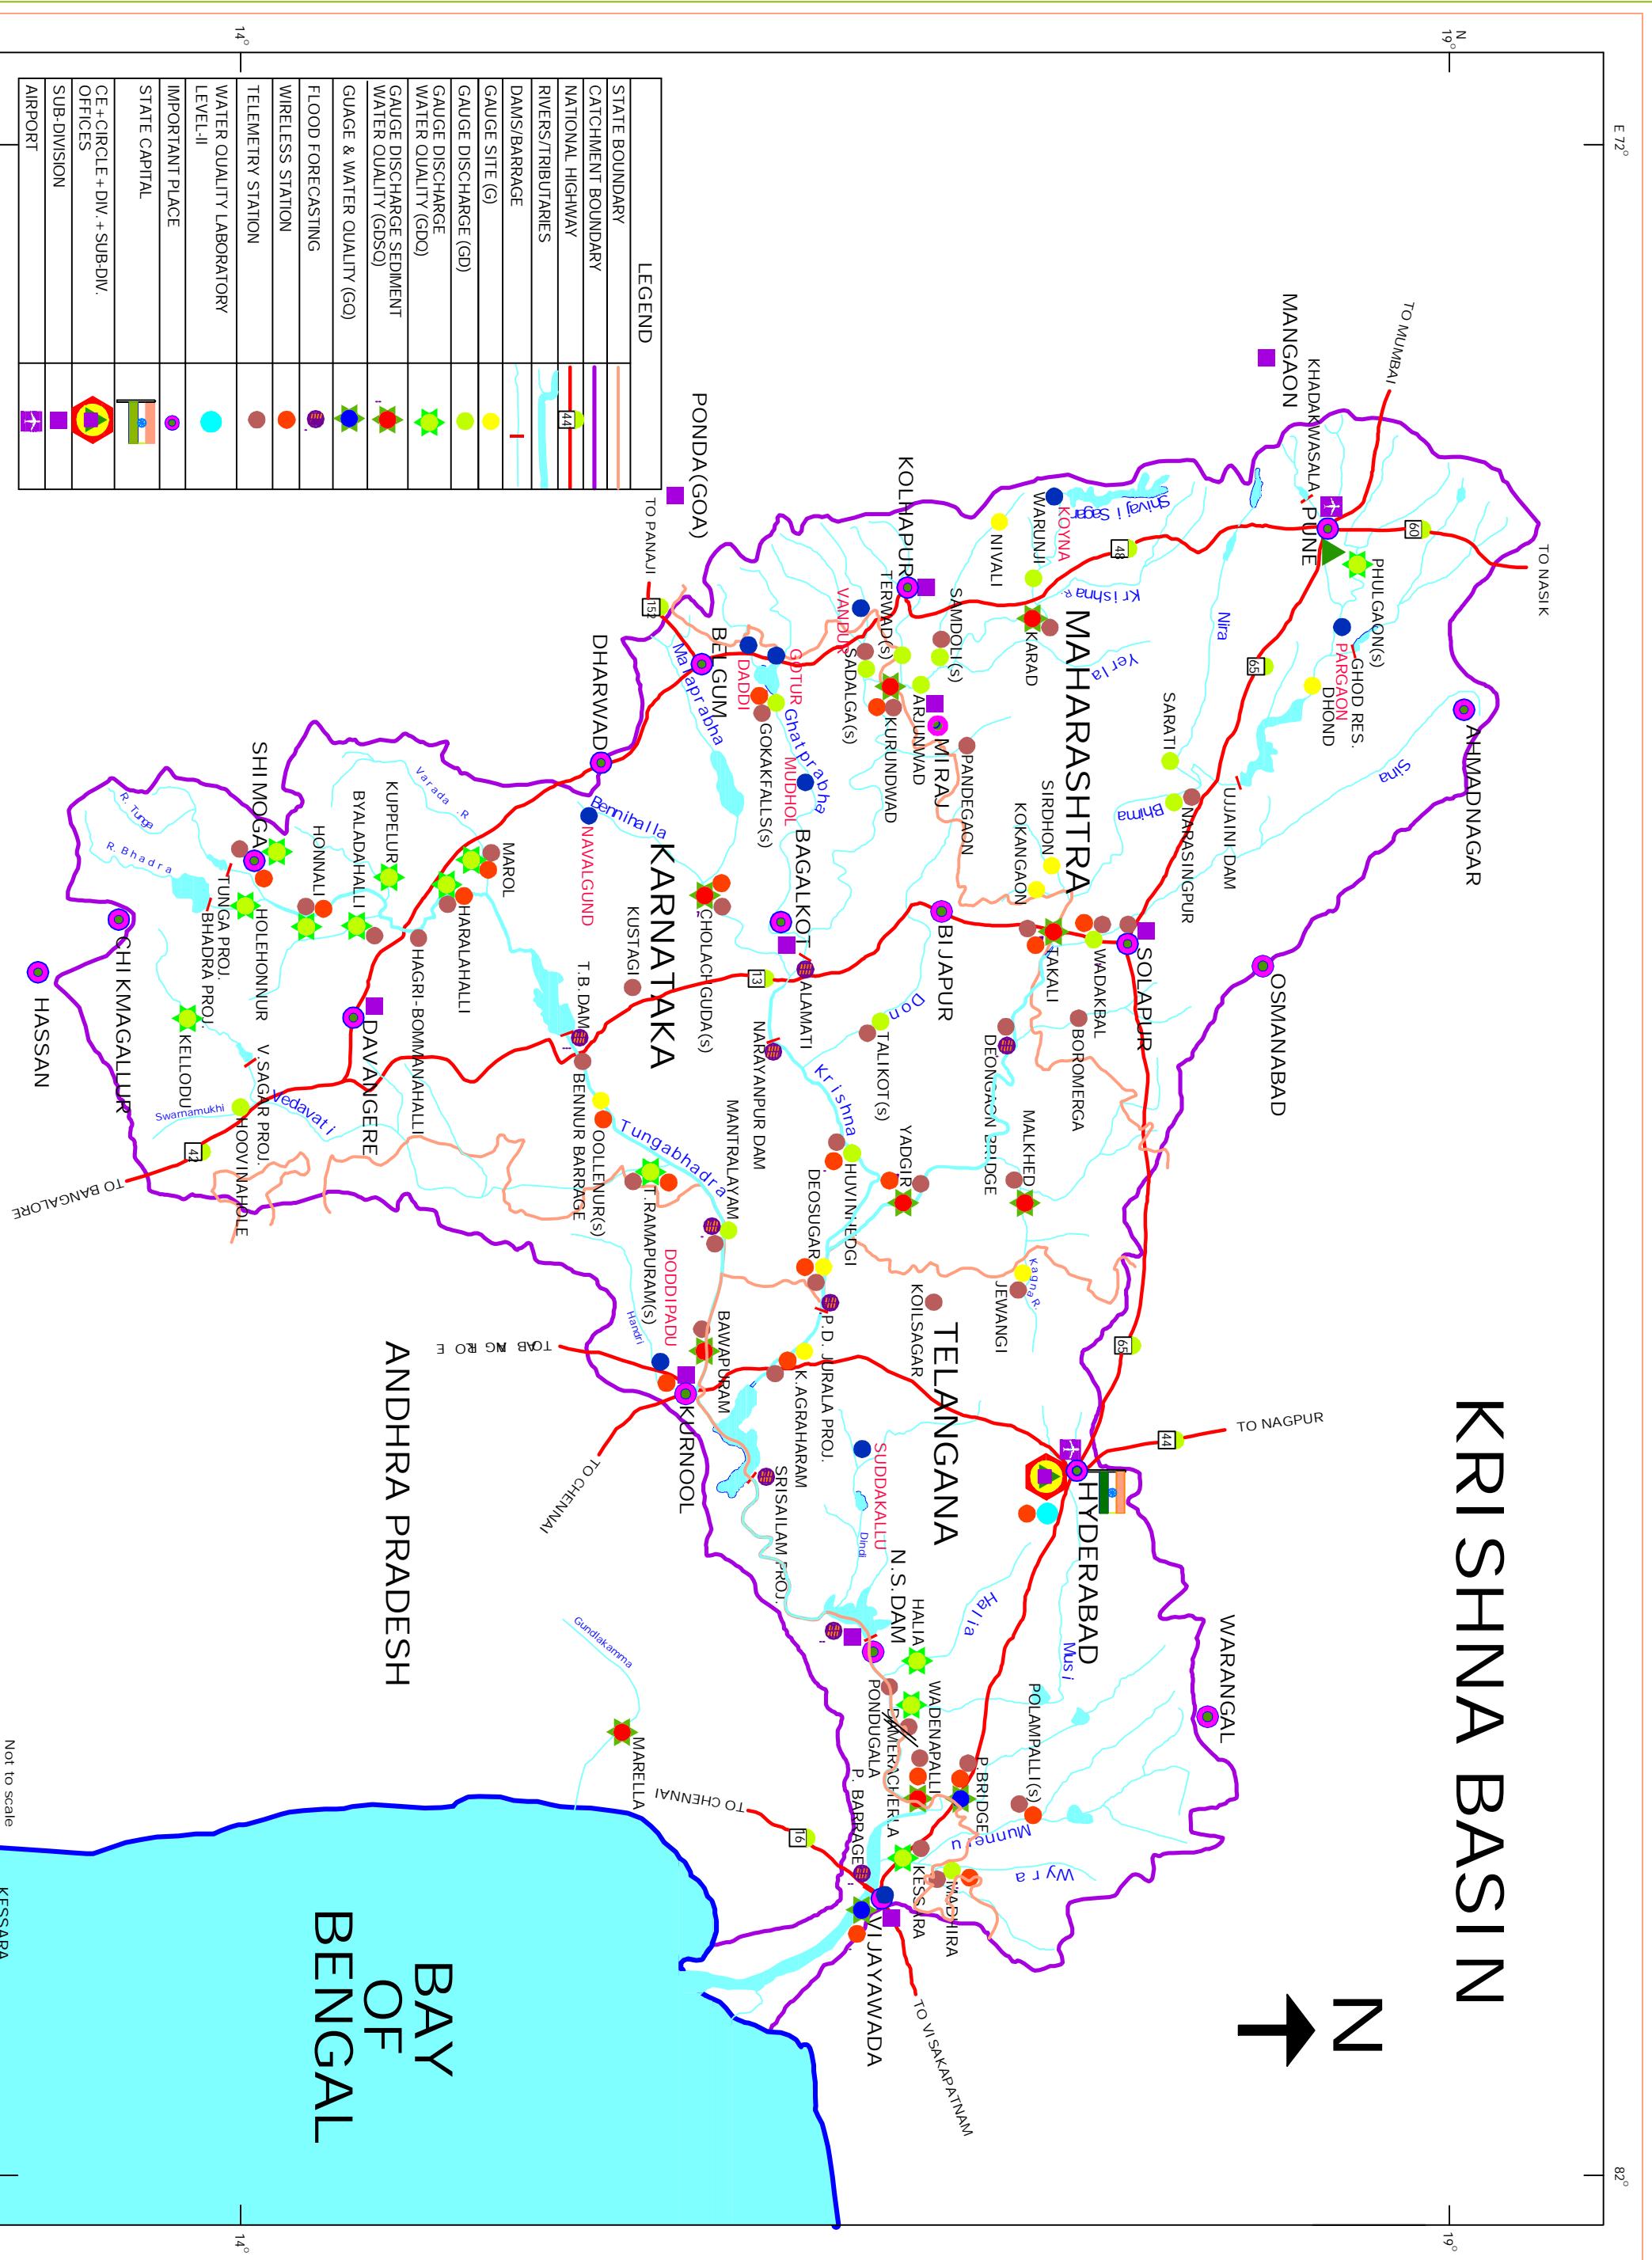

**D Propagation of wildlife, fisheries**

**E Irrigation, industrial cooling and controlled waste disposal**

\* If the coliform count is more than the prescribed tolerance limit, the criteria for coliform shall be satisfied if not more than 20% of samples show more than the tolerance limit specified and not more than 5% of samples show more than 4 times the tolerance limit. Further, the faecal coliform should not be more than 40% of the total coliform.

<b>PESTICIDES</b>						
Analysis not done due to mal function of instrument.						

Samples not collected in June, August, November and from February to May months due to Dry bed/No flow condition.

**Water Quality Summary for the period : 2016-2017**

**Station Name : Madhira ( AKA10D2)**

**Division : Lower Krishna Divn., Hyderabad**

**Local River : Wyra**

**Sub-Division : Lower Krishna SD2, Vijayawada**

**River Water Summary**
