City reservoirs receive inflows equivalent to 10 days' supply

Storage of four lakes climbs from 15 mcft on Thursday to 273 mcft on Friday

SPECIAL CORRESPONDENT
CHENNAI

City reservoirs that have remained bone dry for more than four months have now received inflows equivalent to 10 days of Chennai's water supply following the heavy downpour on Thursday. However, there has been a dip in inflows since Friday morning, as rain has reduced over catchment areas.

According to officials of the Water Resources Department, the total storage of the four lakes climbed from a mere 15 million cubic feet on Thursday morning to 273 mcft on Friday, due to heavy rainfall.

The reservoirs at Red Hills and Cholavaram received up to 600 cusecs (cubic feet per second) of floodwater and this dipped by half on Friday morning.

The Poondi reservoir benefited the most, as it also received inflow from waterways upstream, as far as Andhra Pradesh, through

the Kosasthalaiyar river. The inflow into the lake dipped from 3,500 cusecs to 2,242 cusecs on Friday.

Most tanks are now nearly 40% full in Tiruvallur district, that recorded the highest volume of thundershowers on Thursday morning, officials said. Nine tanks have reached capacity.

"The rain spell has started bringing inflows. But we need more rain to sustain the inflow and increase the

storage," said an official.

The dry bed of the Kosasthalaiyar river too has a flow of 4,000 cusecs now. It has a capacity to carry about 60,000 cusecs.

Rainfall to continue

Meanwhile, the Meteorological Department has forecast that rainfall activity will continue over the coastal areas. It may be heavy in one or two places of the 14 districts, including Tiruvallur, Kan-

cheepuram, Villupuram, Cuddalore and Ariyalur, till Sunday.

N. Puviarasan, director, Area Cyclone Warning Centre, said: "We are expecting another cyclonic circulation to form around September 23. This will increase rainfall across the State. There are chances of very heavy rainfall over the coastal districts and parts of south Tamil Nadu till Tuesday."

Chennai is expected to receive moderate rain in some areas during the weekend, and record a maximum temperature of around 33 degrees Celsius.

Krishna water release to city likely on September 24

Poondi will receive the water by month-end, or early Oct.

K. LAKSHMI
CHENNAI

Krishna water from the Kandaleru reservoir in Andhra Pradesh is likely to be released on September 24. This will provide the much-needed relief to Chennai, struggling to sustain its water supply for several months now.

With the storage in the reservoir steadily rising, the A.P. government is likely to discharge water into the Kandaleru-Poondi canal on Tuesday. The reservoir now has a storage of 8.61 thousand million cubic feet, and received an inflow of 10,000 cusecs on Friday.

CM's word

Officials of the Water Resources Department said the storage would be stepped up. Water is expected to be discharged for both Andhra Pradesh's needs and Chennai's water supply.

As per the inter-State agreement, the city has to be provided with 8 tmc ft of

Krishna water during this spell.

It may take a few days for the water to reach the State's entry point in Uthukottai, Tiruvallur district. The Poondi reservoir will receive Krishna water by the month-end, or in early October, officials added.

During a meeting with a delegation from Tamil Nadu in August, Andhra Pradesh Chief Minister Y.S. Jaganmo-

han Reddy had agreed to release 8 tmc ft of Krishna water to the city.

Supply to increase

At present, Chennai is being supplied with 525 million litres of water a day.

Once the inflow of Krishna water stabilises, piped water supply is likely to improve in the city and the daily volume of supply will be stepped up, said officials.
