दिल्ली-गुरुग्राम रोड पानी-पानी

■ विशेष संवाददाता, गुडगांव

तेज बारिश के चलते ट्रैफिक व्यवस्था पूरी तरह से चरमरा गई। वैसे तो पूरे शहर में हालात काबू से बाहर थे, लेकिन सबसे अधिक परेशानी NH-48 पर हुई। यहां पर तो हालात इतने बिगड़ गए कि ट्रैफिक पुलिस को एडवाइजरी जारी करनी पड़ गई। सोशल मीडिया से लोगों को हाइवे से जाने की बजाय वैकल्पिक रास्तों से जाने की सलाह दी। बारिश के कारण हुए जलभराव से जाम के हालात हो गए। लोगों ने पंद्रह मिनट की दूरी दो घंटे में तय की। हाइवे से नरसिंहपुर से हीरो होंडा चौक की ओर तीन किलोमीटर से अधिक लंबी लाइन वाहनों की लग गई। दोपहर बाद हालात सामान्य हो पाए।

ट्रैफिक नरसिंहपुर पर सबसे अधिक

गड़बड़ था। यहां पर सर्विस लेन के बाद हाइवे पर पानी आने के कारण चार की बजाय एक लेन में ही ट्रैफिक निकल रहा था। इसके अलावा मैन कैरिज की दोनों ओर की दो-दो सर्विस लेन में चार फुट तक पानी था। मानेसर से गुडगांव और गुडगांव से मानेसर की ओर आने-जाने वाले वाहन चालकों को खासी परेशानी हुई। नरसिंहपुर पर शहर में सबसे अधिक जलभराव के कारण ट्रैफिक की तीन से चार किलोमीटर लंबी लाइन लग गई।

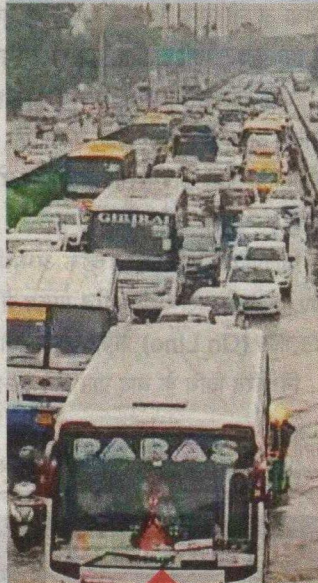

दिल्ली से मानेसर जाने वाले भी परेशानी हुए: दिल्ली से मानेसर जाने वाले वाहन चालकों को भी इससे परेशानी हुई। खांडसा रोड, हीरो होंडा चौक, राज नगर, मोड, सब्जी मंडी पर जलभराव के कारण छोटे वाहनों के खराब होने के कारण जाम लग गया।

NH 48 पर चार फुट तक भरा पानी

बुधवार सुबह से हुई तेज बारिश के कारण शहर के अधिकतर हिस्सों में जलभराव हो गया। सबसे अधिक पानी NH 48 पर नरसिंहपुर पर था। यहां पर तीन से चार फीट तक पानी था। जिससे यहां पर एकाएक हाइवे की शहर के दूसरे एरिया से कनेक्टिविटी ठप हो गई। यहां पर जाम के हालात कई घंटों तक रहे। यहां पर हाइवे के साथ लगती कंपनियों में पानी भर गया। अभी तक यहां पर जीएमडीएर पानी निकासी के लिए पंप लगा ही रहा था कि बारिश हो गई।

बारिश में डूबा गुडगांव, थम गया ट्रैफिक

IANS/PTI

■ गुडगांव में तीन घंटे की बारिश के बाद NH 48 पर लंबा जाम लगा। नरसिंहपुर पॉइंट पर 4 फुट पानी भरा।

■ ओल्ड गुडगांव में कई जगहों पर पानी भरा। हाइवे पर एंबुलेंस भी फंसी रही। कई वीडिकल पानी में बंद हो गए।

■ बारिश 47 MM हुई और सीवर सिस्टम 20 MM बारिश झेल सकता है, ड्रेनेज कनेक्टिविटी प्रॉपर नहीं है।

Delhi-G'gram eway waterlogged, motorists brave long traffic snarls

TRIBUNE NEWS SERVICE

GURUGRAM, JUNE 21

Incessant rainfall since early Wednesday morning brought life to a grinding halt in this satellite city with reports of waterlogging and traffic snarls pouring in. Narsinghpur and Hero Honda chowks were the worst-hit.

The city received 47 mm rainfall. Videos of vehicles with tyres submerged in water went viral on social media. It took between 20 and 30 minutes for commuters to cross the two junctions.

The water especially clogged the Delhi-Gurugram expressway after the rains, causing a traffic jam for up to 5 km. People were highly inconvenienced as massive delays were caused, and public transport was also hindered. A bus full of passengers was stuck for more than an hour. The passengers could do nothing, but wait.

Teams of the police and the Gurugram Metropolitan Development Authority (GMDA) were present at key areas to drain out rainwater through pumps.

PC Meena, GMDA CEO, went around the city reviewing the situation and ordered positioning of pumps at Narsinghpur permanently.

"The GMDA is working to end logjams at the Narsinghpur Chowk. Rainwater was pumped out in less than an hour," said Meena.

Gurugram DC Nishant Yadav, too, issued orders for permanent stationing of mega pumps at Narsinghpur.

A GMDA spokesperson said that the pumping machinery was installed at Narsinghpur to address the waterlogging issue in service lanes.

At present, five fuel stations out of a total 90 HP capacity have been installed by the NHAI at Narsinghpur. The GMDA is further augmenting the pumping capacity by 260 HP wherein one 50 HP pump and three 70 HP pumps are being added.

According to traffic officials, logjams were reported at IFFCO Chowk, Shankar Chowk, Rajiv Chowk, Udyog Vihar, Sohna Road, Golf Course Extension Road and several internal sector roads.

Residents said that in spite of pre-monsoon drain cleaning work, the city still witnessed waterlogging on many stretches of the NH-48 as well as internal roads that led to traffic congestion. Agency inputs

MONSOON WOES

New Delhi: With the monsoon season approaching, Delhi Jal Board has issued its annual monsoon preparedness order on Wednesday. In the flood control order, which will be effective from June 27, the water utility officials have been asked to keep strict vigil at 41 vulnerable waterlogging points and regularly monitor the equipment installed at these sites.

DJB has directed the officials to ensure that all pumps and generator sets installed at critical locations are always functional, that any hindrances to the flow of rainwater into the drains are removed during the monsoon months, that all excavation work are stopped and any trenches found should be filled with soil.

The monsoon is expected to hit the city by the end of this month and will likely prevail till September. During the rainy season, engineers across different zones have been asked to ensure that the maintenance of pumps installed at waterlogging

Vulnerable locations

- 1 Pul Prahladpur underpass
- 2 Jakhira flyover
- 3 Jahangirpuri Metro Station
- 4 Escorts Hospital
- 5 Jullena Chowk
- 6 Modi Mill U-turn
- 7 Devli red light
- 8 Near Dyal Chowk
- 9 Pusa Chowk
- 10 Near Pandav Nagar
- 11 Nangloi Chowk
- 12 Punjabi Bagh flyover underpass
- 13 SP Mukherjee Marg
- 14 A-block, Inderpuri
- 15 OP Bharti Marg T-junction, Adhchini

Steps DJB told to take

- All deep excavation work should be stopped
- All sewage pumping stations to be made functional
- All storm water drains should be cleared of silt
- All trenches are filled with soil

PANDAV NAGAR

ging by the traffic police. DJB is mostly involved in managing large underground drains while the Public Works Department works on stormwater drains and roads.

To avoid urban flooding in the long run, DJB is carrying out the cleaning of trunk sewer lines under the jurisdiction of the water utility. Delhi government aims to clean 110 km of trunk sewer lines by March next year. According to government officials, accumulation of sediment has resulted in reduced flow capacity of the sewage system. Because of this, whenever there is heavy rain, the water overflows on to the roads, causing waterlogging and traffic jams and even mosquito breeding.

In Wednesday's order, the chief engineers of the three project divisions have been directed to review the ongoing construction sites and take necessary actions to ensure barrier-free flow of water into the drains. The officers have been instructed to give special attention to jhuggi jhonpri clusters for flood control.

PWD is likely to issue its own flood control order this coming Monday.

spots remain in good conditions throughout the rains.

"All the pumps/ motors should be made functional in all respects. Generator sets

are stationed at critical installation. Adequate staff should be deployed round the clock for operating the sewage pumping stations," reads

Wednesday's order.

Every year, the various agencies prepare for the monsoon following the identification of spots prone to waterlog-

Gurugram inundated by rainwater again

Vehicles wade through a waterlogged stretch of NH-48 near Narsinghpur village in Gurugram on Wednesday. A four-hour spell of rain in the morning was enough to bring Millennium City to a standstill.

Delhi wakes up to rain, Gurugram to a deluge

HT Correspondent

letters@hindustantimes.com

NEW DELHI: Many areas in Delhi and the National Capital Region woke up to light to moderate showers on Wednesday owing to a low-pressure area in central Uttar Pradesh, the India Meteorological Department (IMD) said, adding that its effect will continue to bring more rain in the next 48 hours in NCR. The Capital received a fresh spell of rain due to the phenomenon even as the effect of cyclone Biparjoy was slowly waning on Tuesday.

However, heavy rain over four hours on Wednesday brought traffic to a standstill in Gurugram as several areas of the city witnessed waterlogging. According to district administration, Gurugram received 33mm of rainfall till 8.30am on Wednesday. Officials said that along with internal roads, Narsinghpur Chowk and Hero Honda Chowk were the most affected. Vehicles were seen submerged

Teams of Municipal Corporation of Gurugram and Gurugram Metropolitan Development Authority were deployed to clear water chutes and road gullies at all waterlogged areas. "At certain locations, the water level gradually receded by 11.30am. In areas where heavy waterlogging was reported, pumps and machinery were deployed to address the situation," said Vikram Singh, executive engineer of GMDA.

However, Arun Sirohi, a commuter from Sohna Road to Cyber City, said that situation was bad between 8am and 11am and commuters had started taking internal roads that led to traffic congestion. "The condition of road on Golf Course Extension Road needs attention and repair work," he said.

Waterlogging was also reported from parts of south and southwest Delhi and the Delhi Traffic Police issued an advisory in the morning for commuters to avoid the carriageway from Mayapuri towards Mayapuri on

Rohtak Road and the carriageway from Dhansa towards Bahadurgarh.

Despite intermittent showers in the first half of the day, it remained sultry for the second half, with the Capital recording a maximum temperature of 37.6 degrees Celsius (°C) on Wednesday. This was, however, a degree below normal for this time of the year. On Tuesday, the maximum temperature was clocked at 38.1°C. Delhi's minimum was recorded at 27.4°C, which was also a degree below normal. It was 27°C on Tuesday. IMD forecasts that Delhi is likely to record a maximum and minimum of 38°C and 28°C, respectively, on Thursday. The maximum temperature was recorded at 36°C in Gurugram, while the minimum was 24°C. No rain was recorded in Noida, where the maximum was clocked at 35.3°C and the minimum was 28°C.

Met officials said that many areas in north, south, and southwest Delhi recorded rain on Wednesday morning between

5.30am and 9.30am, while it skipped several areas in central Delhi altogether. The rain interrupted International Yoga Day celebrations at a few sites as well.

While no rain was recorded at Delhi's base weather station, Safdarjung, through the day, southwest Delhi's Ayanagar received 10.2mm of rainfall till 8.30am on Wednesday.

"We started to see thunder clouds forming from 5.30am and some parts received rain till 9.30am. Two distinct weather cells were formed, one extending from north Delhi towards Noida and the other over Gurugram and south Delhi. Cyclone Biparjoy has weakened and there is a low-pressure area currently over central UP bringing moisture. It is expected to feed moisture over the next 48 hours too," said Kuldeep Srivastava, scientist at IMD.

Wednesday's relative humidity ranged between 57% and 85%, IMD data showed, making for similar sultry conditions as Tuesday.
